Chapter 1

Castle Core Changelog

4.0.0 (2017-01-25)

Breaking Changes:

- Update to NLog 4.4.1 and remove beta .NET Core support for NLog (#228)
- Update to log4net 2.0.7 (#229)

Bugfixes:

- Fix CustomAttributeInfo.FromExpression for VB.NET (, #223)

4.0.0-beta002 (2016-10-28)

Breaking Changes:

- Rework Serilog integration to accept an ILogger rather than a LoggerConfiguration to work correctly with Serilog (#142, #211)
- Remove obsolete property `AttributesToAddToGeneratedTypes` from `ProxyGenerationOptions` (#219)
- Change type of `ProxyGenerationOptions.AdditionalAttributes` to `IList<CustomAttributeInfo>` (#219)
- Remove `IAttributeDisassembler` which is no longer necessary (#219)

Enhancements:

- Add `IProxyGenerator` interface for the `ProxyGenerator` class (#215)
- Improve default list of attributes to avoid replicating. Code Access Security attributes and `MarshalAsAttribute` will no longer be replicated (#221)

Bugfixes:

- Fix building on Mono 4.6.1
- Different attributes in `ProxyGenerationOptions.AdditionalAttributes` now generates different proxy types (#219)

4.0.0-beta001 (2016-07-17)

Breaking Changes:

- Update to log4net 1.2.15/2.0.5 (#199)
- Update to NLog 4.4.0-beta13 (#199)
- Update to Serilog 2.0.0 (#199)

Enhancements:

- .NET Core 1.0 and .NET Standard 1.3 support (Jonathon Rossi, Jeremy Meng)
- Restore DynamicDictionary class

Bugfixes:

- Fix target framework moniker in NuGet package for .NET Core (#174)

4.0.0-alpha001 (2016-04-07)

Breaking Changes:

- Remove all Silverlight support (#100, #150)
- Remove DynamicProxy's RemotableInvocation and remoting support for invocations (#110, #65)

Enhancements:

- .NET Core DNX and dotnet5.4 support via feature conditional compilation (Jonathon Rossi, Jeremy Meng)
- Build script improvements and consolidate version numbers (Blair Conrad, #75, #152, #153)

Bugfixes:

- Fix 'System.ArgumentException: Constant does not match the defined type' with optional, nullable enum method parameters (Daniel Yankowsky, #141, #149)
- Fix proxy generation hook notification for virtual but final methods (Axel Heer, #148)
- Fix InvalidCastException with custom attribute having an enum array parameter with non-int enum (, #104, #105)
- Update to Mono 4.0.2 and improve Mono support (#79, #95, #102)
- Fix 'System.ArrayTypeMismatchException: Source array type cannot be assigned to destination array type' on Mono (#81)
- Fix 'System.ArgumentException: System.Decimal is not a supported constant type' with optional method parameters (, #87, #91)
- Fix ProxyGenerator cache does not take into account AdditionalAttributes (, #77, #78)
- Fix Castle.Services.Logging.SerilogIntegration.dll missing some assembly info attributes (, #20, #82)

3.3.3 (2014-11-06)

- Fix Serilog integration modifies LoggerConfiguration.MinimumLevel (#70)
- Add SourceContext to the Serilog logger (, #69)

3.3.2 (2014-11-03)

- fixed #66 - SerilogLogger implementation bug where exceptions were passed through incorrectly

3.3.1 (2014-09-10)

- implemented #61 - Added support for Serilog - contributed by Russell J Baker ()

3.3.0 (2014-04-27)

- implemented #51 - removed abandoned projects: Binder, Pagination, Validator
- implemented #49 - build NuGet and Zip packages from TeamCity - contributed by Blair Conrad ()
- implemented #42 - move complicated BuildInternalsVisibleMessageForType method out of DynamicProxy↔Builder - contributed by Blair Conrad ()
- fixed #47 - Calling DynamicProxy proxy methods with multidimensional array parameters - contributed by Ed Parcell ()
- fixed #44 - DictionaryAdapter FetchAttribute on type has no effect
- fixed #34 and #39 - inaccessible type parameters should give better error messages - contributed by Blair Conrad ()

3.2.2 (2013-11-30)

- fixed #35 - ParameterBuilder.SetConstant fails when using a default value of null - contributed by ()

3.2.1 (2013-10-05)

- fixed #32 - Improve configuration of SmtpClient in sync sending - contributed by Artur Dorochowicz ()
- fixed #31 - [DynamicProxy] Preserve DefaultValues of proxied method's parameters (in .NET 4.5)
- fixed #30 - tailoring InternalsVisibleTo message based on assembly of inaccessible type - contributed by Blair Conrad ()
- fixed #27 - Allow dynamic proxy of generic interfaces which have generic methods, under Mono 2.10.8 and Mono 3.0.6 - contributed by Iain Ballard (-e-b)
- fixed #26 - Proxy of COM class issue, reference count incremented - contributed by Jean-Claude Viau ()
- fixed DYNPROXY-188 - CreateInterfaceProxyWithoutTarget fails with interface containing member with 'ref UIntPtr' - contributed by Pier Janssen ()
- fixed DYNPROXY-186 - .Net remoting (transparent proxy) cannot be proxied - contributed by Jean-Claude Viau ()
- fixed DYNPROXY-185 - ProxyUtil.GetUnproxiedInstance returns proxy object for ClassProxyWithTarget instead of its target - contributed by Dmitry Xlestkov (-s-x)

3.2.0 (2013-02-16)

- fixed DYNPROXY-179 - Exception when creating a generic proxy (from cache)
- fixed DYNPROXY-175 - invalid CompositionInvocation type used when code uses interface proxies with and without InterceptorSelector

3.1.0 (2012-08-05)

- fixed DYNPROXY-174 - Unable to cast object of type 'System.Collections.ObjectModel.ReadOnlyCollection<System.Reflection.CustomAttributeTypedArgument>' to type 'System.Array'

3.1.0 RC (2012-07-08)

- support multiple inheritance of DA attributes on interfaces.
- BREAKING CHANGE: removed propagate child notifications as it violated INotifyPropertyChanged contract
- improved DictionaryAdapter performance
- generalized IBindingList support for DictionaryAdapters
- added reference support to XmlAdapter
- BREAKING CHANGE: refactored XPathAdapter into XmlAdapter with much more flexibility to support other input like XQuery
- implemented CORE-43 - Add option to skip configuring log4net/nlog
- fixed CORE-44 - NLog logger does not preserve call site info
- fixed DYNPROXY-171 - PEVerify error on generic method definition
- fixed DYNPROXY-170 - Calls to properties inside non-intercepted methods are not forwarded to target object (regression from v2.5)
- fixed DYNPROXY-169 - Support IChangeProxyTarget on additional interfaces and mixins when using CreateInterfaceProxyWithTargetInterface

3.0.0 (2011-12-13)

- no major changes since RC

3.0.0 RC 1 (2011-11-20)

- Applied Jeff Sharps patch that refactored Xml DictionaryAdapter to improve maintainability and enable more complete functionality
- fixed DYNPROXY-165 - Object.GetType() and Object.MemberwiseClone() should be ignored and not reported as non-interceptable to IProxyGenerationHook
- fixed DYNPROXY-164 - Invalid Proxy type generated when there are more than one base class generic constraints
- fixed DYNPROXY-162 - ref or out parameters can not be passed back if proxied method throw an exception

3.0.0 beta 1 (2011-08-14)

Breaking Changes:

- Removed overloads of logging methods that were taking format string from ILogger and ILogger and I↔ExtendedLogger and didn't have word Format in their name.
 - For example:
 - * void Error(string format, params object[] args); // was removed
 - * void ErrorFormat(string format, params object[] args); //use this one instead
 - impact - low
 - fixability - medium
 - description - To minimize confusion and duplication those methods were removed.
 - fix - Use methods that have explicit "Format" word in their name and same signature.
- Removed WebLogger and WebLoggerFactory
 - impact - low
 - fixability - medium
 - description - To minimize management overhead the classes were removed so that only single Client Profile version of Castle.Core can be distributed.
 - fix - You can use NLog or Log4Net web logger integration, or reuse implementation of existing web logger and use it as a custom logger.
- Removed obsolete overload of ProxyGenerator.CreateClassProxy
 - impact - low
 - fixability - trivial
 - description - Deprecated overload of ProxyGenerator.CreateClassProxy was removed to keep the method consistent with other methods and to remove confusion
 - fix - whenever removed overload was used, use one of the other overloads.
- IProxyGenerationHook.NonVirtualMemberNotification method was renamed
 - impact - high
 - fixability - easy
 - description - to accommodate class proxies with target method NonVirtualMemberNotification on I↔ProxyGenerationHook type was renamed to more accurate NonProxyableMemberNotification since for class proxies with target not just methods but also fields and other member that break the abstraction will be passed to this method.
 - fix - whenever NonVirtualMemberNotification is used/implemented change the method name to NonProxyableMemberNotification. Implementors should also accommodate possibility that not only MethodInfos will be passed as method's second parameter.
- DynamicProxy will now allow to intercept members of System.Object
 - impact - very low
 - fixability - easy
 - description - to allow scenarios like mocking of System.Object members, DynamicProxy will not disallow proxying of these methods anymore. AllMethodsHook (default IProxyGenerationHook) will still filter them out though.
 - fix - whenever custom IProxyGenerationHook is used, user should account for System.Object's members being now passed to ShouldInterceptMethod and NonVirtualMemberNotification methods and if necessary update the code to handle them appropriately.

Bugfixes:

- fixed CORE-37 - TAB characters in the XML Configuration of a component parameter is read as String.Empty
- fixed DYNPROXY-161 - Strong Named DynamicProxy Assembly Not Available in Silverlight
- fixed DYNPROXY-159 - Sorting MemberInfo array for serialization has side effects
- fixed DYNPROXY-158 - Can't create class proxy with target and without target in same ProxyGenerator
- fixed DYNPROXY-153 - When proxying a generic interface which has an interface as GenericType . No proxy can be created
- fixed DYNPROXY-151 - Cast error when using attributes
- implemented CORE-33 - Add lazy logging
- implemented DYNPROXY-156 - Provide mechanism for interceptors to implement retry logic
- removed obsolete members from ILogger and its implementations

2.5.2 (2010-11-15)

- fixed DYNPROXY-150 - Finalizer should not be proxied
- implemented DYNPROXY-149 - Make AllMethodsHook members virtual so it can be used as a base class
- fixed DYNPROXY-147 - Can't create class proxies with two non-public methods having same argument types but different return type
- fixed DYNPROXY-145 Unable to proxy System.Threading.SynchronizationContext (.NET 4.0)
- fixed DYNPROXY-144 - params argument not supported in constructor
- fixed DYNPROXY-143 - Permit call to reach "non-proxied" methods of inherited interfaces
- implemented DYNPROXY-139 - Better error message
- fixed DYNPROXY-133 - Debug assertion in ClassProxyInstanceContributor fails when proxying ISerializable with an explicit implementation of GetObjectData
- fixed CORE-32 - Determining if permission is granted via PermissionUtil does not work in .NET 4
- applied patch by Alwin Meijis - ExtendedLog4netFactory can be configured with a stream from for example an embedded log4net xml config
- Upgraded NLog to 2.0 Beta 1
- Added DefaultXmlSerializer to bridge XPathAdapter with standard Xml Serialization.
- XPathAdapter for DictionaryAdapter added IXPathSerializer to provide hooks for custom serialization.

2.5.1 (2010-09-21)

- Interface proxy with target Interface now accepts null as a valid target value (which can be replaced at a later stage).
- DictionaryAdapter behavior overrides are now ordered with all other behaviors
- BREAKING CHANGE: removed web logger so that by default Castle.Core works in .NET 4 client profile
- added paramter to ModuleScope disabling usage of signed modules. This is to workaround issue DYNPROXY-134. Also a descriptive exception message is being thrown now when the issue is detected.
- Added IDictionaryBehaviorBuilder to allow grouping behaviors
- Added GenericDictionaryAdapter to simplify generic value sources
- fixed issue DYNPROXY-138 - Error message missing space
- fixed false positive where DynamicProxy would not let you proxy interface with target interface when target object was a COM object.
- fixed ReflectionBasedDictionaryAdapter when using indexed properties

2.5.0 (2010-08-21)

- DynamicProxy will now not replicate non-public attribute types
- Applied patch from Kenneth Siewers Mller which adds parameterless constructor to DefaultSmtpSender implementation, to be able to configure the inner SmtpClient from the application configuration file (system.net.smtp).
- added support for .NET 4 and Silverlight 4, updated solution to VisualStudio 2010
- Removed obsolete overload of CreateClassProxy
- Added class proxy with taget
- Added ability to intercept explicitly implemented generic interface methods on class proxy.
- DynamicProxy does not disallow intercepting members of System.Object anymore. AllMethodsHook will still filter them out though.
- Added ability to intercept explicitly implemented interface members on class proxy. Does not support generic members.
- Merged DynamicProxy into Core binary
- fixed DYNPROXY-ISSUE-132 - "MetaProperty equals implementation incorrect"
- Fixed bug in DiagnosticsLoggerTestCase, where when running as non-admin, the teardown will throw SecurityException (contributed by maxild)
- Split IoC specific classes into Castle.Windsor project
- Merged logging services solution
- Merged DynamicProxy project

1.2.0 (2010-01-11)

- Added IEmailSender interface and its default implementation

1.2.0 beta (2009-12-04)

- BREAKING CHANGE - added `ChangeProxyTarget` method to `IChangeProxyTarget` interface
- added docs to `IChangeProxyTarget` methods
- Fixed DYNPROXY-ISSUE-108 - Obtaining replicated custom attributes on proxy may fail when property setter throws exception on default value
- Moved custom attribute replication from `CustomAttributeUtil` to new interface - `IAttributeDisassembler`
- Exposed `IAttributeDisassembler` via `ProxyGenerationOptions`, so that users can plug their implementation for some convoluted scenarios. (for Silverlight)
- Moved `IIInterceptorSelector` from Dynamic Proxy to Core (IOC-ISSUE-156)

1.1.0 (2009-05-04)

- Applied Eric Hauser's patch fixing CORE-ISSUE-22 "Support for environment variables in resource URI"
- Applied Gauthier Segay's patch fixing CORE-ISSUE-20 "Castle.Core.Tests won't build via nant because it use `TraceContext` without referencing `System.Web.dll`"
- Added simple interface to `ComponentModel` to make optional properties required.
- Applied Mark's – mwatts42@gmail.com – patch that changes the Core to support being compiled for Silverlight 2
- Applied Louis DeJardin's patch adding `TraceLogger` as a new logger implementation
- Applied Chris Bilson's patch fixing CORE-15 "WebLogger Throws When Logging Outside of an `HttpContext`"

Release Candidate 3

- Added `IServiceProviderEx` which extends `IServiceProvider`
- Added `Pair<T,S>` class.
- Applied Bill Pierce's patch fixing CORE-9 "Allow `CastleComponent` Attribute to Specify Lifestyle in Constructor"
- Added `UseSingleInterfaceProxy` to `ComponentModel` to control the proxying behavior while maintaining backward compatibility. Added the corresponding `ComponentProxyBehaviorAttribute`.
- Made `NullLogger` and `IExtenedLogger`
- Enabled a new format on `ILogger` interface, with 6 overloads for each method:
 - `Debug(string)`
 - `Debug(string, Exception)`
 - `Debug(string, params object[])`
 - `DebugFormat(string, params object[])`
 - `DebugFormat(Exception, string, params object[])`
 - `DebugFormat(IFormatProvider, string, params object[])`
 - `DebugFormat(IFormatProvider, Exception, string, params object[])`
 - The "FatalError" overloads where marked as `[Obsolete]`, replaced by "Fatal" and "FatalFormat".

0.0.1.0

- Included IProxyTargetAccessor
- Removed IMethodInterceptor and IMethodInvocation, that have been replaced by IInterceptor and IInvocation
- Added FindByPropertyInfo to PropertySetCollection
- Made the DependencyModel.IsOptional property writable
- Applied Curtis Schlak's patch fixing IOC-27 "assembly resource format only works for resources where the assemblies name and default namespace are the same."

Quoting:

"I chose to preserve backwards compatibility by implementing the code in the reverse order as suggested by the reporter. Given the following URI for a resource:

assembly://my.cool.assembly/context/moo/file.xml

It will initially look for an embedded resource with the manifest name of "my.cool.assembly.context.moo.file.xml" in the loaded assembly my.cool.assembly.dll. If it does not find it, then it looks for the embedded resource with the manifest name of "context.moo.file.xml".

- IServiceEnabledComponent Introduced to be used across the project as a standard way to have access to common services, for example, logger factories
- Added missing log factories
- Refactor StreamLogger and DiagnosticLogger to be more consistent behavior-wise
- Refactored WebLogger to extend LevelFilteredLogger (removed duplication)
- Refactored LoggerLevel order
- Project started

Chapter 2

Castle Core Changelog

4.2.1 (2017-10-11)

Bugfixes:

- Add missing equality checks in `MethodSignatureComparer.EqualSignatureTypes` to fix `TypeLoadExceptions` ("Method does not have an implementation") (, #310)
- Add missing XML documentation files to NuGet packages (, #312)

4.2.0 (2017-09-28)

Enhancements:

- Add `IProxyTargetAccessor.DynProxySetTarget` to set the target of a proxy (, #293)
- Internal dynamic proxy fields are now private instead of public (, #260)

Bugfixes:

- Make `ProxyUtil.IsAccessible(MethodBase)` take into account declaring type's accessibility so it doesn't report false negatives for e.g. public methods in inaccessible classes. (, #289)
- Fix `InvalidCastException` calling `IChangeProxyTarget.ChangeProxyTarget` proxying generic interfaces (, #293)
- Ignore minor/patch level version for `AssemblyVersionAttribute` as this creates binding errors for downstream libraries (, #288)
- Fix `DictionaryAdapter` firing `NotifyPropertyChanged(ed/ing)` events after `CancelEdit` (, #299)
- Fix `ArgumentException` when overriding method with nested generics (, #297)
- Explicit package versioning applied within solution to avoid malformed NuGet upgrades for lock step versioned packages. (, #292)

Deprecations:

- `IChangeProxyTarget.ChangeProxyTarget` is deprecated in favor of `IProxyTargetAccessor.DynProxySetTarget` (, #293)

4.1.1 (2017-07-12)

Bugfixes:

- Prevent member name collision when proxy implements same generic interface more than twice (, #88)
- Fix incorrect replication (reversed order) of custom modifiers (modopts and modreqs) on the CLR, does not work yet on Mono (, #277)
- Fix COM interface proxy error case throwing exceptions trying to release null pointer from QueryInterface (, #281)

4.1.0 (2017-06-11)

Breaking Changes:

- Remove AllowPartiallyTrustedCallersAttribute, which wasn't defined by default (, #241)
- Upgrade log4net to v2.0.8 (, #241)

Enhancements:

- Add ProxyUtil.IsAccessible to check if a method is accessible to DynamicProxyGenAssembly2 (Blair Conrad, #235)
- Refactor build engineering to support AppVeyor and TravisCI (, #241)

Bugfixes:

- Fix order of class proxy constructor arguments when using multiple mixins (, #230)
- Fix dependency on "System.ComponentModel.TypeConverter" NuGet package version that does not exist (#239)
- Fix ParamArrayAttribute not being replicated in proxy (, #121)
- Fix System.Net.Mail.SmtpClient is obsolete on Mono warning (#254)

4.0.0 (2017-01-25)

Breaking Changes:

- Update to NLog 4.4.1 and remove beta .NET Core support for NLog (#228)
- Update to log4net 2.0.7 (#229)

Bugfixes:

- Fix CustomAttributeInfo.FromExpression for VB.NET (, #223)

4.0.0-beta002 (2016-10-28)

Breaking Changes:

- Rework Serilog integration to accept an ILogger rather than a LoggerConfiguration to work correctly with Serilog (#142, #211)
- Remove obsolete property `AttributesToAddToGeneratedTypes` from `ProxyGenerationOptions` (#219)
- Change type of `ProxyGenerationOptions.AdditionalAttributes` to `IList<CustomAttributeInfo>` (#219)
- Remove `IAttributeDisassembler` which is no longer necessary (#219)

Enhancements:

- Add `IProxyGenerator` interface for the `ProxyGenerator` class (#215)
- Improve default list of attributes to avoid replicating. Code Access Security attributes and `MarshalAsAttribute` will no longer be replicated (#221)

Bugfixes:

- Fix building on Mono 4.6.1
- Different attributes in `ProxyGenerationOptions.AdditionalAttributes` now generates different proxy types (#219)

4.0.0-beta001 (2016-07-17)

Breaking Changes:

- Update to log4net 1.2.15/2.0.5 (#199)
- Update to NLog 4.4.0-beta13 (#199)
- Update to Serilog 2.0.0 (#199)

Enhancements:

- .NET Core 1.0 and .NET Standard 1.3 support (Jonathon Rossi, Jeremy Meng)
- Restore `DynamicDictionary` class

Bugfixes:

- Fix target framework moniker in NuGet package for .NET Core (#174)

4.0.0-alpha001 (2016-04-07)

Breaking Changes:

- Remove all Silverlight support (#100, #150)
- Remove DynamicProxy's RemotableInvocation and remoting support for invocations (#110, #65)

Enhancements:

- .NET Core DNX and dotnet5.4 support via feature conditional compilation (Jonathon Rossi, Jeremy Meng)
- Build script improvements and consolidate version numbers (Blair Conrad, #75, #152, #153)

Bugfixes:

- Fix 'System.ArgumentException: Constant does not match the defined type' with optional, nullable enum method parameters (Daniel Yankowsky, #141, #149)
- Fix proxy generation hook notification for virtual but final methods (Axel Heer, #148)
- Fix InvalidCastException with custom attribute having an enum array parameter with non-int enum (, #104, #105)
- Update to Mono 4.0.2 and improve Mono support (#79, #95, #102)
- Fix 'System.ArrayTypeMismatchException: Source array type cannot be assigned to destination array type' on Mono (#81)
- Fix 'System.ArgumentException: System.Decimal is not a supported constant type' with optional method parameters (, #87, #91)
- Fix ProxyGenerator cache does not take into account AdditionalAttributes (, #77, #78)
- Fix Castle.Services.Logging.SerilogIntegration.dll missing some assembly info attributes (, #20, #82)

3.3.3 (2014-11-06)

- Fix Serilog integration modifies LoggerConfiguration.MinimumLevel (#70)
- Add SourceContext to the Serilog logger (, #69)

3.3.2 (2014-11-03)

- fixed #66 - SerilogLogger implementation bug where exceptions were passed through incorrectly

3.3.1 (2014-09-10)

- implemented #61 - Added support for Serilog - contributed by Russell J Baker ()

3.3.0 (2014-04-27)

- implemented #51 - removed abandoned projects: Binder, Pagination, Validator
- implemented #49 - build NuGet and Zip packages from TeamCity - contributed by Blair Conrad ()
- implemented #42 - move complicated BuildInternalsVisibleMessageForType method out of DynamicProxy↔ Builder - contributed by Blair Conrad ()
- fixed #47 - Calling DynamicProxy proxy methods with multidimensional array parameters - contributed by Ed Parcell ()
- fixed #44 - DictionaryAdapter FetchAttribute on type has no effect
- fixed #34 and #39 - inaccessible type parameters should give better error messages - contributed by Blair Conrad ()

3.2.2 (2013-11-30)

- fixed #35 - ParameterBuilder.SetConstant fails when using a default value of null - contributed by ()

3.2.1 (2013-10-05)

- fixed #32 - Improve configuration of SmtplibClient in sync sending - contributed by Artur Dorochochicz ()
- fixed #31 - [DynamicProxy] Preserve DefaultValues of proxied method's parameters (in .NET 4.5)
- fixed #30 - tailoring InternalsVisibleTo message based on assembly of inaccessible type - contributed by Blair Conrad ()
- fixed #27 - Allow dynamic proxy of generic interfaces which have generic methods, under Mono 2.10.8 and Mono 3.0.6 - contributed by Iain Ballard (-e-b)
- fixed #26 - Proxy of COM class issue, reference count incremented - contributed by Jean-Claude Viau ()
- fixed DYNPROXY-188 - CreateInterfaceProxyWithoutTarget fails with interface containing member with 'ref UIntPtr' - contributed by Pier Janssen ()
- fixed DYNPROXY-186 - .Net remoting (transparent proxy) cannot be proxied - contributed by Jean-Claude Viau ()
- fixed DYNPROXY-185 - ProxyUtil.GetUnproxiedInstance returns proxy object for ClassProxyWithTarget instead of its target - contributed by Dmitry Xlestkov (-s-x)

3.2.0 (2013-02-16)

- fixed DYNPROXY-179 - Exception when creating a generic proxy (from cache)
- fixed DYNPROXY-175 - invalid CompositionInvocation type used when code uses interface proxies with and without InterceptorSelector

3.1.0 (2012-08-05)

- fixed DYNPROXY-174 - Unable to cast object of type 'System.Collections.ObjectModel.ReadOnly↔ Collection`1[System.Reflection.CustomAttributeTypedArgument]' to type 'System.Array'

3.1.0 RC (2012-07-08)

- support multiple inheritance of DA attributes on interfaces.
- BREAKING CHANGE: removed propagate child notifications as it violated INotifyPropertyChanged contract
- improved DictionaryAdapter performance
- generalized IBindingList support for DictionaryAdapters
- added reference support to XmlAdapter
- BREAKING CHANGE: refactored XPathAdapter into XmlAdapter with much more flexibility to support other input like X.Linq
- implemented CORE-43 - Add option to skip configuring log4net/nlog
- fixed CORE-44 - NLog logger does not preserve call site info
- fixed DYNPROXY-171 - PEVerify error on generic method definition
- fixed DYNPROXY-170 - Calls to properties inside non-intercepted methods are not forwarded to target object (regression from v2.5)
- fixed DYNPROXY-169 - Support IChangeProxyTarget on additional interfaces and mixins when using CreateInterfaceProxyWithTargetInterface

3.0.0 (2011-12-13)

- no major changes since RC

3.0.0 RC 1 (2011-11-20)

- Applied Jeff Sharps patch that refactored Xml DictionaryAdapter to improve maintainability and enable more complete functionality
- fixed DYNPROXY-165 - Object.GetType() and Object.MemberwiseClone() should be ignored and not reported as non-interceptable to IProxyGenerationHook
- fixed DYNPROXY-164 - Invalid Proxy type generated when there are more than one base class generic constraints
- fixed DYNPROXY-162 - ref or out parameters can not be passed back if proxied method throw an exception

3.0.0 beta 1 (2011-08-14)**Breaking Changes:**

- Removed overloads of logging methods that were taking format string from ILogger and ILogger and IExtendedLogger and didn't have word Format in their name.
 - For example:
 - * void Error(string format, params object[] args); // was removed
 - * void ErrorFormat(string format, params object[] args); //use this one instead
 - impact - low
 - fixability - medium
 - description - To minimize confusion and duplication those methods were removed.

- fix - Use methods that have explicit "Format" word in their name and same signature.
- Removed WebLogger and WebLoggerFactory
 - impact - low
 - fixability - medium
 - description - To minimize management overhead the classes were removed so that only single Client Profile version of Castle.Core can be distributed.
 - fix - You can use NLog or Log4Net web logger integration, or reuse implementation of existing web logger and use it as a custom logger.
- Removed obsolete overload of ProxyGenerator.CreateClassProxy
 - impact - low
 - fixability - trivial
 - description - Deprecated overload of ProxyGenerator.CreateClassProxy was removed to keep the method consistent with other methods and to remove confusion
 - fix - whenever removed overload was used, use one of the other overloads.
- IProxyGenerationHook.NonVirtualMemberNotification method was renamed
 - impact - high
 - fixability - easy
 - description - to accommodate class proxies with target method NonVirtualMemberNotification on IProxyGenerationHook type was renamed to more accurate NonProxyableMemberNotification since for class proxies with target not just methods but also fields and other member that break the abstraction will be passed to this method.
 - fix - whenever NonVirtualMemberNotification is used/implemented change the method name to NonProxyableMemberNotification. Implementors should also accommodate possibility that not only MethodInfo's will be passed as method's second parameter.
- DynamicProxy will now allow to intercept members of System.Object
 - impact - very low
 - fixability - easy
 - description - to allow scenarios like mocking of System.Object members, DynamicProxy will not disallow proxying of these methods anymore. AllMethodsHook (default IProxyGenerationHook) will still filter them out though.
 - fix - whenever custom IProxyGenerationHook is used, user should account for System.Object's members being now passed to ShouldInterceptMethod and NonVirtualMemberNotification methods and if necessary update the code to handle them appropriately.

Bugfixes:

- fixed CORE-37 - TAB characters in the XML Configuration of a component parameter is read as String.Empty
- fixed DYNPROXY-161 - Strong Named DynamicProxy Assembly Not Available in Silverlight
- fixed DYNPROXY-159 - Sorting MemberInfo array for serialization has side effects
- fixed DYNPROXY-158 - Can't create class proxy with target and without target in same ProxyGenerator
- fixed DYNPROXY-153 - When proxying a generic interface which has an interface as GenericType . No proxy can be created
- fixed DYNPROXY-151 - Cast error when using attributes
- implemented CORE-33 - Add lazy logging
- implemented DYNPROXY-156 - Provide mechanism for interceptors to implement retry logic
- removed obsolete members from ILogger and its implementations

2.5.2 (2010-11-15)

- fixed DYNPROXY-150 - Finalizer should not be proxied
- implemented DYNPROXY-149 - Make AllMethodsHook members virtual so it can be used as a base class
- fixed DYNPROXY-147 - Can't create class proxies with two non-public methods having same argument types but different return type
- fixed DYNPROXY-145 Unable to proxy System.Threading.SynchronizationContext (.NET 4.0)
- fixed DYNPROXY-144 - params argument not supported in constructor
- fixed DYNPROXY-143 - Permit call to reach "non-proxied" methods of inherited interfaces
- implemented DYNPROXY-139 - Better error message
- fixed DYNPROXY-133 - Debug assertion in ClassProxyInstanceContributor fails when proxying ISerializable with an explicit implementation of GetObjectData
- fixed CORE-32 - Determining if permission is granted via PermissionUtil does not work in .NET 4
- applied patch by Alwin Meijs - ExtendedLog4netFactory can be configured with a stream from for example an embedded log4net xml config
- Upgraded NLog to 2.0 Beta 1
- Added DefaultXmlSerializer to bridge XPathAdapter with standard Xml Serialization.
- XPathAdapter for DictionaryAdapter added IXPathSerializer to provide hooks for custom serialization.

2.5.1 (2010-09-21)

- Interface proxy with target Interface now accepts null as a valid target value (which can be replaced at a later stage).
- DictionaryAdapter behavior overrides are now ordered with all other behaviors
- BREAKING CHANGE: removed web logger so that by default Castle.Core works in .NET 4 client profile
- added parameter to ModuleScope disabling usage of signed modules. This is to workaround issue DYNPROXY-134. Also a descriptive exception message is being thrown now when the issue is detected.
- Added IDictionaryBehaviorBuilder to allow grouping behaviors
- Added GenericDictionaryAdapter to simplify generic value sources
- fixed issue DYNPROXY-138 - Error message missing space
- fixed false positive where DynamicProxy would not let you proxy interface with target interface when target object was a COM object.
- fixed ReflectionBasedDictionaryAdapter when using indexed properties

2.5.0 (2010-08-21)

- DynamicProxy will now not replicate non-public attribute types
- Applied patch from Kenneth Siewers Mller which adds parameterless constructor to DefaultSmtpSender implementation, to be able to configure the inner SmtpClient from the application configuration file (system.<→net.smtp).
- added support for .NET 4 and Silverlight 4, updated solution to VisualStudio 2010
- Removed obsolete overload of CreateClassProxy
- Added class proxy with taget
- Added ability to intercept explicitly implemented generic interface methods on class proxy.
- DynamicProxy does not disallow intercepting members of System.Object anymore. AllMethodsHook will still filter them out though.
- Added ability to intercept explicitly implemented interface members on class proxy. Does not support generic members.
- Merged DynamicProxy into Core binary
- fixed DYNPROXY-ISSUE-132 - "MetaProperty equals implementation incorrect"
- Fixed bug in DiagnosticsLoggerTestCase, where when running as non-admin, the teardown will throw SecurityException (contributed by maxild)
- Split IoC specific classes into Castle.Windsor project
- Merged logging services solution
- Merged DynamicProxy project

1.2.0 (2010-01-11)

- Added IEmailSender interface and its default implementation

1.2.0 beta (2009-12-04)

- BREAKING CHANGE - added ChangeProxyTarget method to IChangeProxyTarget interface
- added docs to IChangeProxyTarget methods
- Fixed DYNPROXY-ISSUE-108 - Obtaining replicated custom attributes on proxy may fail when property setter throws exception on default value
- Moved custom attribute replication from CustomAttributeUtil to new interface - IAttributeDisassembler
- Exposed IAttributeDisassembler via ProxyGenerationOptions, so that users can plug their implementation for some convoluted scenarios. (for Silverlight)
- Moved IInterceptorSelector from Dynamic Proxy to Core (IOC-ISSUE-156)

1.1.0 (2009-05-04)

- Applied Eric Hauser's patch fixing CORE-ISSUE-22 "Support for environment variables in resource URI"
- Applied Gauthier Segay's patch fixing CORE-ISSUE-20 "Castle.Core.Tests won't build via nant because it use TraceContext without referencing System.Web.dll"
- Added simple interface to ComponentModel to make optional properties required.
- Applied Mark's – mwatts42@gmail.com – patch that changes the Core to support being compiled for Silverlight 2
- Applied Louis DeJardin's patch adding TraceLogger as a new logger implementation
- Applied Chris Bilson's patch fixing CORE-15 "WebLogger Throws When Logging Outside of an HttpContext"

Release Candidate 3

- Added IServiceProviderEx which extends IServiceProvider
- Added Pair<T,S> class.
- Applied Bill Pierce's patch fixing CORE-9 "Allow CastleComponent Attribute to Specify Lifestyle in Constructor"
- Added UseSingleInterfaceProxy to ComponentModel to control the proxying behavior while maintaining backward compatibility. Added the corresponding ComponentProxyBehaviorAttribute.
- Made NullLogger and IExtendedLogger
- Enabled a new format on ILogger interface, with 6 overloads for each method:
 - Debug(string)
 - Debug(string, Exception)
 - Debug(string, params object[])
 - DebugFormat(string, params object[])
 - DebugFormat(Exception, string, params object[])
 - DebugFormat(IFormatProvider, string, params object[])
 - DebugFormat(IFormatProvider, Exception, string, params object[])
 - The "FatalError" overloads were marked as [Obsolete], replaced by "Fatal" and "FatalFormat".

0.0.1.0

- Included IProxyTargetAccessor
- Removed IMethodInterceptor and IMethodInvocation, that have been replaced by IInterceptor and IInvocation
- Added FindByPropertyInfo to PropertySetCollection
- Made the DependencyModel.IsOptional property writable
- Applied Curtis Schlak's patch fixing IOC-27 "assembly resource format only works for resources where the assemblies name and default namespace are the same."

Quoting:

"I chose to preserve backwards compatibility by implementing the code in the reverse order as suggested by the reporter. Given the following URI for a resource:

assembly://my.cool.assembly/context/moo/file.xml

It will initially look for an embedded resource with the manifest name of "my.cool.assembly.context.moo.file.xml" in the loaded assembly my.cool.assembly.dll. If it does not find it, then it looks for the embedded resource with the manifest name of "context.moo.file.xml".

- IServiceEnabledComponent Introduced to be used across the project as a standard way to have access to common services, for example, logger factories
- Added missing log factories
- Refactor StreamLogger and DiagnosticLogger to be more consistent behavior-wise
- Refactored WebLogger to extend LevelFilteredLogger (removed duplication)
- Refactored LoggerLevel order
- Project started

Chapter 3

Brewday2

Per compilare il progetto è necessario utilizzare Visual Studio <https://www.visualstudio.com/it/downloads/> (in qualsiasi versione da Community ad enterprise, escluso Visual Studio Code!). Nel programma di aggiunta strumenti e funzionalità è necessario aggiungere all'installazione:

- Sviluppo per desktop .net
- Sviluppo asp.NET e web
- Sviluppo di Azure

In alternativa è possibile compilare il progetto con gli ide C# alternativi Xamarin Studio oppure SharpDevelop ma potrebbero richiedere modifiche alla struttura interna dei file di progetto e non è garantito il supporto completo delle funzionalità.

Il deploy del progetto compilato viene periodicamente effettuato sul seguente sito: <http://brewday.cu.cc/>

Durante lo sviluppo il sito non rifletterà immediatamente tutti i cambiamenti effettuati sui sorgenti, alla consegna del progetto sarà la versione finale.

Namespace Index

4.1 Packages

Here are the packages with brief descriptions (if available):

BrewDay	39
BrewDay2	39
BrewDay2.App_Start	39
BrewDay2.App_Start.Tests	40
BrewDay2.Controllers	40
BrewDay2.Controllers.Tests	40
BrewDay2.Controllers.Testsn	41
BrewDay2.Controllers.UnitTest	41
BrewDay2.Models	41
BrewDay2.Models.Tests	42
BrewDay2.Tests	43
BrewDay.Models	44
BrewDay.Models.Tests	44
UnitTestProject	44
UnitTestProject.Controllers	44

Chapter 5

Hierarchical Index

5.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

BrewDay2.Controllers.Tests.AccountControllerTest	51
BrewDay2.Tests.AccountControllerTest	58
BrewDay2.Controllers.Testsn.AccountControllerTest	65
BrewDay2.Controllers.Tests.AccountControllerTests	73
UnitTestProject.Controllers.AccountControllerTests	77
BrewDay2.Models.Additivi	78
BrewDay2.Controllers.Tests.AdditiviControllerTest	84
BrewDay2.Tests.AdditiviControllerTest	87
BrewDay2.Controllers.Tests.AdditiviControllerTests	90
UnitTestProject.Controllers.AdditiviControllerTests	91
BrewDay2.Models.AdditiviMagazzino	92
BrewDay2.Models.AdditiviRicetta	93
BrewDay2.Tests.AdditiviRicettaTest	95
BrewDay2.Tests.AdditiviTest	95
BrewDay2.Models.AddPhoneNumberViewModel	95
BrewDay2.Tests.ApplicationDbContextTest	100
BrewDay2.Models.Tests.ApplicationDbContextTests	101
BrewDay2.Tests.ApplicationUserTest	105
BrewDay2.Models.Tests.ApplicationUserTests	106
BrewDay2.Tests.BundleConfigTests	107
BrewDay2.Models.CategoriaBirre	107
BrewDay2.Models.ChangePasswordViewModel	108
BrewDay2.Models.ConfigureTwoFactorViewModel	109
Controller	
BrewDay2.Controllers.AccountController	45
BrewDay2.Controllers.AdditiviController	80
BrewDay2.Controllers.HomeController	115
BrewDay2.Controllers.LievitisController	126
BrewDay2.Controllers.LuppoliController	142
BrewDay2.Controllers.MagazzinoController	158
BrewDay2.Controllers.MaltisController	184

BrewDay2.Tests.StartupTests	271
UnitTestProject.UnitTest1	271
UserManager	
BrewDay2.ApplicationUserManager	104
BrewDay2.Models.VerifyCodeViewModel	272
BrewDay2.Models.VerifyPhoneNumberViewModel	273
BrewDay2.Models.Zuccheri	274
BrewDay2.Models.ZuccheriMagazzino	276
BrewDay2.Models.ZuccheriRicetta	277
BrewDay2.Tests.ZuccheriRicettaTest	278
BrewDay2.Tests.ZuccherisControllerTest	283
BrewDay2.Controllers.Tests.ZuccherisControllerTest	286
BrewDay2.Controllers.Tests.ZuccherisControllerTests	289
BrewDay2.Tests.ZuccheriTest	290

Chapter 6

Class Index

6.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

BrewDay2.Controllers.AccountController	45
BrewDay2.Controllers.Tests.AccountControllerTest	
Questa classe contiene unit test con parametri per AccountController	51
BrewDay2.Tests.AccountControllerTest	
Questa classe contiene unit test con parametri per AccountController	58
BrewDay2.Controllers.Testsn.AccountControllerTest	
Questa classe contiene unit test con parametri per AccountController	65
BrewDay2.Controllers.Tests.AccountControllerTests	73
UnitTestProject.Controllers.AccountControllerTests	77
BrewDay2.Models.Additivi	78
BrewDay2.Controllers.AdditiviController	80
BrewDay2.Controllers.Tests.AdditiviControllerTest	
Questa classe contiene unit test con parametri per AdditiviController	84
BrewDay2.Tests.AdditiviControllerTest	87
BrewDay2.Controllers.Tests.AdditiviControllerTests	90
UnitTestProject.Controllers.AdditiviControllerTests	91
BrewDay2.Models.AdditiviMagazzino	92
BrewDay2.Models.AdditiviRicetta	93
BrewDay2.Tests.AdditiviRicettaTest	
Questa classe contiene unit test con parametri per AdditiviRicetta	95
BrewDay2.Tests.AdditiviTest	
Questa classe contiene unit test con parametri per Additivi	95
BrewDay2.Models.AddPhoneNumberViewModel	95
BrewDay2.Models.ApplicationDbContext	96
BrewDay2.Tests.ApplicationDbContextTest	
Questa classe contiene unit test con parametri per ApplicationDbContext	100
BrewDay2.Models.Tests.ApplicationDbContextTests	101
BrewDay2.ApplicationSignInManager	102
BrewDay2.Models.ApplicationUser	104
BrewDay2.ApplicationUserManager	104
BrewDay2.Tests.ApplicationUserTest	
Questa classe contiene unit test con parametri per ApplicationUser	105
BrewDay2.Models.Tests.ApplicationUserTests	106
BrewDay2.Tests.BundleConfigTests	107
BrewDay2.Models.CategoriaBirre	107

BrewDay2.Models.ChangePasswordViewModel	108
BrewDay2.Models.ConfigureTwoFactorViewModel	109
BrewDay2.Models.DecimalModelBinder	110
BrewDay2.EmailService	111
BrewDay2.Models.ExternalLoginConfirmationViewModel	111
BrewDay2.Models.ExternalLoginListViewModel	112
BrewDay2.Models.FactorViewModel	112
BrewDay2.Tests.FilterConfigTests	113
BrewDay2.Models.ForgotPasswordViewModel	114
BrewDay2.Tests.ForgotPasswordViewModelTest	
Questa classe contiene unit test con parametri per ForgotPasswordViewModel	114
BrewDay2.Models.ForgotViewModel	114
BrewDay2.Controllers.HomeController	115
BrewDay2.Tests.HomeControllerTest	116
BrewDay2.Controllers.Tests.HomeControllerTest	
Questa classe contiene unit test con parametri per HomeController	117
BrewDay2.Controllers.Tests.HomeControllerTests	119
BrewDay2.Models.IndexViewModel	120
BrewDay2.Tests.IndexViewModelTest	
Questa classe contiene unit test con parametri per IndexViewModel	121
BrewDay2.Models.Lieviti	122
BrewDay2.Models.LievitiMagazzino	123
BrewDay2.Models.LievitiRicetta	125
BrewDay2.Tests.LievitiRicettaTest	
Questa classe contiene unit test con parametri per LievitiRicetta	126
BrewDay2.Controllers.LievitisController	126
BrewDay2.Tests.LievitisControllerTest	
Questa classe contiene unit test con parametri per LievitisController	131
BrewDay2.Controllers.Tests.LievitisControllerTest	
Questa classe contiene unit test con parametri per LievitisController	134
BrewDay2.Controllers.Tests.LievitisControllerTests	137
BrewDay2.Models.Tests.LievitiTest	
Questa classe contiene unit test con parametri per Lieviti	138
BrewDay2.Models.LoginViewModel	139
BrewDay2.Tests.LoginViewModelTest	
Questa classe contiene unit test con parametri per LoginViewModel	140
BrewDay2.Models.Luppoli	140
BrewDay2.Controllers.LuppoliController	142
BrewDay2.Tests.LuppoliControllerTest	
Questa classe contiene unit test con parametri per LuppoliController	146
BrewDay2.Controllers.Tests.LuppoliControllerTest	
Questa classe contiene unit test con parametri per LuppoliController	149
BrewDay2.Controllers.Tests.LuppoliControllerTests	152
BrewDay2.Models.LuppoliMagazzino	153
BrewDay2.Models.LuppoliRicetta	155
BrewDay2.Tests.LuppoliRicettaTest	
Questa classe contiene unit test con parametri per LuppoliRicetta	156
BrewDay2.Tests.LuppoliTest	
Questa classe contiene unit test con parametri per Luppoli	156
BrewDay2.Models.Magazzino	156
BrewDay2.Controllers.MagazzinoController	158
BrewDay2.Controllers.Tests.MagazzinoControllerTest	
Questa classe contiene unit test con parametri per MagazzinoController	169
BrewDay2.Tests.MagazzinoControllerTests	172
BrewDay2.Controllers.Tests.MagazzinoControllerTests	175
BrewDay2.Models.Malti	180
BrewDay2.Models.MaltiMagazzino	182
BrewDay2.Models.MaltiRicetta	183

BrewDay2.Models.Tests.MaltiRicettaTest	
Questa classe contiene unit test con parametri per MaltiRicetta	184
BrewDay2.Controllers.MaltisController	184
BrewDay2.Tests.MaltisControllerTest	
Questa classe contiene unit test con parametri per MaltisController	189
BrewDay2.Controllers.Tests.MaltisControllerTest	
Questa classe contiene unit test con parametri per MaltisController	192
BrewDay2.Controllers.Tests.MaltisControllerTests	195
BrewDay2.Controllers.UnitTest.MaltisControlleruTest	
Questa classe contiene unit test con parametri per MaltisController	196
BrewDay.Models.Tests.MaltiTest	
Questa classe contiene unit test con parametri per Malti	199
BrewDay2.Controllers.ManageController	200
BrewDay2.Tests.ManageControllerTest	
Questa classe contiene unit test con parametri per ManageController	205
BrewDay2.Controllers.Tests.ManageControllerTest	
Questa classe contiene unit test con parametri per ManageController	211
BrewDay2.Controllers.Tests.ManageControllerTests	217
BrewDay2.Models.ManageLoginsViewModel	221
BrewDay2.MvcApplication	221
BrewDay2.App_Start.PathConfig	222
BrewDay2.App_Start.Tests.PathConfigTests	225
BrewDay2.Models.RegisterViewModel	226
BrewDay2.Tests.RegisterViewModelTest	
Questa classe contiene unit test con parametri per RegisterViewModel	227
BrewDay2.Models.ResetPasswordViewModel	227
BrewDay2.Tests.ResetPasswordViewModelTest	
Questa classe contiene unit test con parametri per ResetPasswordViewModel	228
BrewDay2.Models.Ricette	229
BrewDay2.Controllers.RicetteController	232
BrewDay2.Controllers.Tests.RicetteControllerTest	
Questa classe contiene unit test con parametri per RicetteController	248
BrewDay2.Tests.RicetteControllerTest	
Questa classe contiene unit test con parametri per RicetteController	257
BrewDay2.Controllers.Tests.RicetteControllerTests	260
BrewDay2.Models.Tests.RicetteTest	
Questa classe contiene unit test con parametri per Ricette	266
BrewDay2.Tests.RouteConfigTests	266
BrewDay2.Models.SendCodeViewModel	267
BrewDay2.Models.SetPasswordViewModel	268
BrewDay2.SmsService	269
BrewDay2.Startup	270
BrewDay2.Tests.StartupTests	271
UnitTestProject.UnitTest1	271
BrewDay2.Models.VerifyCodeViewModel	272
BrewDay2.Models.VerifyPhoneNumberViewModel	273
BrewDay2.Models.Zuccheri	274
BrewDay2.Models.ZuccheriMagazzino	276
BrewDay2.Models.ZuccheriRicetta	277
BrewDay2.Tests.ZuccheriRicettaTest

- async Task< ActionResult > [Login](#) ([LoginViewModel](#) model, string returnUrl)
- async Task< ActionResult > [VerifyCode](#) (string provider, string returnUrl, bool rememberMe)
- async Task< ActionResult > [VerifyCode](#) ([VerifyCodeViewModel](#) model)
- ActionResult [Register](#) ()
- async Task< ActionResult > [Register](#) ([RegisterViewModel](#) model)
- async Task< ActionResult > [ConfirmEmail](#) (string userId, string code)
- ActionResult [ForgotPassword](#) ()
- async Task< ActionResult > [ForgotPassword](#) ([ForgotPasswordViewModel](#) model)
- ActionResult [ForgotPasswordConfirmation](#) ()
- ActionResult [ResetPassword](#) (string code)
- async Task< ActionResult > [ResetPassword](#) ([ResetPasswordViewModel](#) model)
- ActionResult [ResetPasswordConfirmation](#) ()
- ActionResult [ExternalLogin](#) (string provider, string returnUrl)
- async Task< ActionResult > [SendCode](#) (string returnUrl, bool rememberMe)
- async Task< ActionResult > [SendCode](#) ([SendCodeViewModel](#) model)
- async Task< ActionResult > [ExternalLoginCallback](#) (string returnUrl)
- async Task< ActionResult > [ExternalLoginConfirmation](#) ([ExternalLoginConfirmationViewModel](#) model, string returnUrl)
- ActionResult [LogOff](#) ()
- ActionResult [ExternalLoginFailure](#) ()

Protected Member Functions

- override void [Dispose](#) (bool disposing)

Properties

- [ApplicationSignInManager SignInManager](#) [get]
- [ApplicationUserManager UserManager](#) [get]

9.1.1 Detailed Description

Definition at line 13 of file AccountController.cs.

9.1.2 Constructor & Destructor Documentation

9.1.2.1 AccountController() [1/2]

```
BrewDay2.Controllers.AccountController.AccountController ( )
```

Definition at line 18 of file AccountController.cs.

9.1.2.2 AccountController() [2/2]

```
BrewDay2.Controllers.AccountController.AccountController (
    ApplicationUserManager userManager,
    ApplicationSignInManager signInManager )
```

Definition at line 22 of file AccountController.cs.

9.1.3 Member Function Documentation

9.1.3.1 ConfirmEmail()

```
async Task<ActionResult> BrewDay2.Controllers.AccountController.ConfirmEmail (
    string userId,
    string code )
```

Definition at line 162 of file AccountController.cs.

9.1.3.2 Dispose()

```
override void BrewDay2.Controllers.AccountController.Dispose (
    bool disposing ) [protected]
```

Definition at line 383 of file AccountController.cs.

9.1.3.3 ExternalLogin()

```
ActionResult BrewDay2.Controllers.AccountController.ExternalLogin (
    string provider,
    string returnUrl )
```

Definition at line 257 of file AccountController.cs.

9.1.3.4 ExternalLoginCallback()

```
async Task<ActionResult> BrewDay2.Controllers.AccountController.ExternalLoginCallback (
    string returnUrl )
```

Definition at line 301 of file AccountController.cs.

9.1.3.5 ExternalLoginConfirmation()

```
async Task<ActionResult> BrewDay2.Controllers.AccountController.ExternalLoginConfirmation (
    ExternalLoginConfirmationViewModel model,
    string returnUrl )
```

Definition at line 332 of file AccountController.cs.

9.1.3.6 ExternalLoginFailure()

```
ActionResult BrewDay2.Controllers.AccountController.ExternalLoginFailure ( )
```

Definition at line 378 of file AccountController.cs.

9.1.3.7 ForgotPassword() [1/2]

```
ActionResult BrewDay2.Controllers.AccountController.ForgotPassword ( )
```

Definition at line 175 of file AccountController.cs.

9.1.3.8 ForgotPassword() [2/2]

```
async Task<ActionResult> BrewDay2.Controllers.AccountController.ForgotPassword (
    ForgotPasswordViewModel model )
```

Definition at line 185 of file AccountController.cs.

9.1.3.9 ForgotPasswordConfirmation()

```
ActionResult BrewDay2.Controllers.AccountController.ForgotPasswordConfirmation ( )
```

Definition at line 205 of file AccountController.cs.

9.1.3.10 Login() [1/2]

```
ActionResult BrewDay2.Controllers.AccountController.Login (
    string returnUrl )
```

Definition at line 43 of file AccountController.cs.

9.1.3.11 Login() [2/2]

```
async Task<ActionResult> BrewDay2.Controllers.AccountController.Login (
    LoginViewModel model,
    string returnUrl )
```

Definition at line 54 of file AccountController.cs.

9.1.3.12 LogOff()

```
ActionResult BrewDay2.Controllers.AccountController.LogOff ( )
```

Definition at line 369 of file AccountController.cs.

9.1.3.13 Register() [1/2]

```
ActionResult BrewDay2.Controllers.AccountController.Register ( )
```

Definition at line 123 of file AccountController.cs.

9.1.3.14 Register() [2/2]

```
async Task<ActionResult> BrewDay2.Controllers.AccountController.Register (
    RegisterViewModel model )
```

Definition at line 133 of file AccountController.cs.

9.1.3.15 ResetPassword() [1/2]

```
ActionResult BrewDay2.Controllers.AccountController.ResetPassword (
    string code )
```

Definition at line 213 of file AccountController.cs.

9.1.3.16 ResetPassword() [2/2]

```
async Task<ActionResult> BrewDay2.Controllers.AccountController.ResetPassword (
    ResetPasswordViewModel model )
```

Definition at line 223 of file AccountController.cs.

9.1.3.17 ResetPasswordConfirmation()

```
ActionResult BrewDay2.Controllers.AccountController.ResetPasswordConfirmation ( )
```

Definition at line 247 of file AccountController.cs.

9.1.3.18 SendCode() [1/2]

```
async Task<ActionResult> BrewDay2.Controllers.AccountController.SendCode (
    string returnUrl,
    bool rememberMe )
```

Definition at line 266 of file AccountController.cs.

9.1.3.19 SendCode() [2/2]

```
async Task<ActionResult> BrewDay2.Controllers.AccountController.SendCode (
    SendCodeViewModel model )
```

Definition at line 283 of file AccountController.cs.

9.1.3.20 VerifyCode() [1/2]

```
async Task<ActionResult> BrewDay2.Controllers.AccountController.VerifyCode (
    string provider,
    string returnUrl,
    bool rememberMe )
```

Definition at line 81 of file AccountController.cs.

9.1.3.21 VerifyCode() [2/2]

```
async Task<ActionResult> BrewDay2.Controllers.AccountController.VerifyCode (
    VerifyCodeViewModel model )
```

Definition at line 96 of file AccountController.cs.

9.1.4 Property Documentation

9.1.4.1 SignInManager

```
ApplicationSignInManager BrewDay2.Controllers.AccountController.SignInManager [get]
```

Definition at line 29 of file AccountController.cs.

9.1.4.2 UserManager

```
ApplicationUserManager BrewDay2.Controllers.AccountController.UserManager [get]
```

Definition at line 35 of file AccountController.cs.

The documentation for this class was generated from the following file:

- BrewDay2/Controllers/[AccountController.cs](#)

9.2 BrewDay2.Controllers.Tests.AccountControllerTest Class Reference

Questa classe contiene unit test con parametri per [AccountController](#)

Public Member Functions

- [AccountController ConstructorTest](#) ([ApplicationUserManager](#) userManager, [ApplicationSignInManager](#) signInManager)
Test stub per .ctor(ApplicationUserManager, ApplicationSignInManager)
- Task< ActionResult > [ConfirmEmailTest](#) ([PexAssumeUnderTest][AccountController](#) target, string userId, string code)
Test stub per ConfirmEmail(String, String)
- ActionResult [ExternalLoginTest](#) ([PexAssumeUnderTest][AccountController](#) target, string provider, string returnUrl)
Test stub per ExternalLogin(String, String)
- Task< ActionResult > [ExternalLoginCallbackTest](#) ([PexAssumeUnderTest][AccountController](#) target, string returnUrl)
Test stub per ExternalLoginCallback(String)
- Task< ActionResult > [ExternalLoginConfirmationTest](#) ([PexAssumeUnderTest][AccountController](#) target, [ExternalLoginConfirmationViewModel](#) model, string returnUrl)
Test stub per ExternalLoginConfirmation(ExternalLoginConfirmationViewModel, String)
- ActionResult [ExternalLoginFailureTest](#) ([PexAssumeUnderTest][AccountController](#) target)
Test stub per ExternalLoginFailure()
- ActionResult [ForgotPasswordTest](#) ([PexAssumeUnderTest][AccountController](#) target)
Test stub per ForgotPassword()
- Task< ActionResult > [ForgotPasswordTest01](#) ([PexAssumeUnderTest][AccountController](#) target, [ForgotPasswordViewModel](#) model)
Test stub per ForgotPassword(ForgotPasswordViewModel)
- ActionResult [ForgotPasswordConfirmationTest](#) ([PexAssumeUnderTest][AccountController](#) target)
Test stub per ForgotPasswordConfirmation()
- ActionResult [LogOffTest](#) ([PexAssumeUnderTest][AccountController](#) target)
Test stub per LogOff()
- ActionResult [LoginTest](#) ([PexAssumeUnderTest][AccountController](#) target, string returnUrl)
Test stub per Login(String)
- Task< ActionResult > [LoginTest01](#) ([PexAssumeUnderTest][AccountController](#) target, [LoginViewModel](#) model, string returnUrl)
Test stub per Login(LoginViewModel, String)
- ActionResult [RegisterTest](#) ([PexAssumeUnderTest][AccountController](#) target)
Test stub per Register()
- Task< ActionResult > [RegisterTest01](#) ([PexAssumeUnderTest][AccountController](#) target, [RegisterViewModel](#) model)
Test stub per Register(RegisterViewModel)
- ActionResult [ResetPasswordTest](#) ([PexAssumeUnderTest][AccountController](#) target, string code)
Test stub per ResetPassword(String)
- Task< ActionResult > [ResetPasswordTest01](#) ([PexAssumeUnderTest][AccountController](#) target, [ResetPasswordViewModel](#) model)
Test stub per ResetPassword(ResetPasswordViewModel)
- ActionResult [ResetPasswordConfirmationTest](#) ([PexAssumeUnderTest][AccountController](#) target)
Test stub per ResetPasswordConfirmation()

9.2.1 Detailed Description

Questa classe contiene unit test con parametri per [AccountController](#)

Definition at line 18 of file AccountControllerTest.cs.

9.2.2 Member Function Documentation

9.2.2.1 ConfirmEmailTest()

```
Task<ActionResult> BrewDay2.Controllers.Tests.AccountControllerTest.ConfirmEmailTest (
    [PexAssumeUnderTest] AccountController target,
    string userId,
    string code )
```

Test stub per ConfirmEmail(String, String)

Definition at line 32 of file AccountControllerTest.cs.

9.2.2.2 ConstructorTest()

```
AccountController BrewDay2.Controllers.Tests.AccountControllerTest.ConstructorTest (
    ApplicationUserManager userManager,
    ApplicationSignInManager signInManager )
```

Test stub per .ctor(ApplicationUserManager, ApplicationSignInManager)

Definition at line 23 of file AccountControllerTest.cs.

9.2.2.3 ExternalLoginCallbackTest()

```
Task<ActionResult> BrewDay2.Controllers.Tests.AccountControllerTest.ExternalLoginCallbackTest  
(  
    [PexAssumeUnderTest] AccountController target,  
    string returnUrl )
```

Test stub per ExternalLoginCallback(String)

Definition at line 58 of file AccountControllerTest.cs.

9.2.2.4 ExternalLoginConfirmationTest()

```
Task<ActionResult> BrewDay2.Controllers.Tests.AccountControllerTest.ExternalLoginConfirmation↵  
Test (   
    [PexAssumeUnderTest] AccountController target,  
    ExternalLoginConfirmationViewModel model,  
    string returnUrl )
```

Test stub per ExternalLoginConfirmation(ExternalLoginConfirmationViewModel, String)

Definition at line 67 of file AccountControllerTest.cs.

9.2.2.5 ExternalLoginFailureTest()

```
ActionResult BrewDay2.Controllers.Tests.AccountControllerTest.ExternalLoginFailureTest (   
    [PexAssumeUnderTest] AccountController target )
```

Test stub per ExternalLoginFailure()

Definition at line 80 of file AccountControllerTest.cs.

9.2.2.6 ExternalLoginTest()

```
ActionResult BrewDay2.Controllers.Tests.AccountControllerTest.ExternalLoginTest (   
    [PexAssumeUnderTest] AccountController target,  
    string provider,  
    string returnUrl )
```

Test stub per ExternalLogin(String, String)

Definition at line 45 of file AccountControllerTest.cs.

9.2.2.7 ForgotPasswordConfirmationTest()

```
ActionResult BrewDay2.Controllers.Tests.AccountControllerTest.ForgotPasswordConfirmationTest (
    [PexAssumeUnderTest] AccountController target )
```

Test stub per ForgotPasswordConfirmation()

Definition at line 107 of file AccountControllerTest.cs.

9.2.2.8 ForgotPasswordTest()

```
ActionResult BrewDay2.Controllers.Tests.AccountControllerTest.ForgotPasswordTest (
    [PexAssumeUnderTest] AccountController target )
```

Test stub per ForgotPassword()

Definition at line 89 of file AccountControllerTest.cs.

9.2.2.9 ForgotPasswordTest01()

```
Task<ActionResult> BrewDay2.Controllers.Tests.AccountControllerTest.ForgotPasswordTest01 (
    [PexAssumeUnderTest] AccountController target,
    ForgotPasswordViewModel model )
```

Test stub per ForgotPassword(ForgotPasswordViewModel)

Definition at line 98 of file AccountControllerTest.cs.

9.2.2.10 LoginTest()

```
ActionResult BrewDay2.Controllers.Tests.AccountControllerTest.LoginTest (
    [PexAssumeUnderTest] AccountController target,
    string returnUrl )
```

Test stub per Login(String)

Definition at line 125 of file AccountControllerTest.cs.

9.2.2.11 LoginTest01()

```
Task<ActionResult> BrewDay2.Controllers.Tests.AccountControllerTest.LoginTest01 (
    [PexAssumeUnderTest] AccountController target,
    LoginViewModel model,
    string returnUrl )
```

Test stub per Login(LoginViewModel, String)

Definition at line 134 of file AccountControllerTest.cs.

9.2.2.12 LogOffTest()

```
ActionResult BrewDay2.Controllers.Tests.AccountControllerTest.LogOffTest (
    [PexAssumeUnderTest] AccountController target )
```

Test stub per LogOff()

Definition at line 116 of file AccountControllerTest.cs.

9.2.2.13 RegisterTest()

```
ActionResult BrewDay2.Controllers.Tests.AccountControllerTest.RegisterTest (
    [PexAssumeUnderTest] AccountController target )
```

Test stub per Register()

Definition at line 147 of file AccountControllerTest.cs.

9.2.2.14 RegisterTest01()

```
Task<ActionResult> BrewDay2.Controllers.Tests.AccountControllerTest.RegisterTest01 (
    [PexAssumeUnderTest] AccountController target,
    RegisterViewModel model )
```

Test stub per Register(RegisterViewModel)

Definition at line 156 of file AccountControllerTest.cs.

9.2.2.15 ResetPasswordConfirmationTest()

```
ActionResult BrewDay2.Controllers.Tests.AccountControllerTest.ResetPasswordConfirmationTest (
    [PexAssumeUnderTest] AccountController target )
```

Test stub per ResetPasswordConfirmation()

Definition at line 183 of file AccountControllerTest.cs.

9.2.2.16 ResetPasswordTest()

```
ActionResult BrewDay2.Controllers.Tests.AccountControllerTest.ResetPasswordTest (
    [PexAssumeUnderTest] AccountController target,
    string code )
```

Test stub per ResetPassword(String)

Definition at line 165 of file AccountControllerTest.cs.

9.2.2.17 ResetPasswordTest01()

```
Task<ActionResult> BrewDay2.Controllers.Tests.AccountControllerTest.ResetPasswordTest01 (
    [PexAssumeUnderTest] AccountController target,
    ResetPasswordViewModel model )
```

Test stub per ResetPassword(ResetPasswordViewModel)

Definition at line 174 of file AccountControllerTest.cs.

9.2.2.18 SendCodeTest()

```
Task<ActionResult> BrewDay2.Controllers.Tests.AccountControllerTest.SendCodeTest (
    [PexAssumeUnderTest] AccountController target,
    string returnUrl,
    bool rememberMe )
```

Test stub per SendCode(String, Boolean)

Definition at line 192 of file AccountControllerTest.cs.

9.2.2.19 SendCodeTest01()

```
Task<ActionResult> BrewDay2.Controllers.Tests.AccountControllerTest.SendCodeTest01 (
    [PexAssumeUnderTest] AccountController target,
    SendCodeViewModel model )
```

Test stub per SendCode(SendCodeViewModel)

Definition at line 205 of file AccountControllerTest.cs.

9.2.2.20 SignInManagerGetTest()

```
ApplicationSignInManager BrewDay2.Controllers.Tests.AccountControllerTest.SignInManagerGetTest
(
    [PexAssumeUnderTest] AccountController target )
```

Test stub per get_SignInManager()

Definition at line 237 of file AccountControllerTest.cs.

9.2.2.21 UserManagerGetTest()

```
ApplicationUserManager BrewDay2.Controllers.Tests.AccountControllerTest.UserManagerGetTest (
    [PexAssumeUnderTest] AccountController target )
```

Test stub per get_UserManager()

Definition at line 246 of file AccountControllerTest.cs.

9.2.2.22 VerifyCodeTest()

```
Task<ActionResult> BrewDay2.Controllers.Tests.AccountControllerTest.VerifyCodeTest (
    [PexAssumeUnderTest] AccountController target,
    string provider,
    string returnUrl,
    bool rememberMe )
```

Test stub per VerifyCode(String, String, Boolean)

Definition at line 214 of file AccountControllerTest.cs.

9.2.2.23 VerifyCodeTest01()

```
Task<ActionResult> BrewDay2.Controllers.Tests.AccountControllerTest.VerifyCodeTest01 (
    [PexAssumeUnderTest] AccountController target,
    VerifyCodeViewModel model )
```

Test stub per VerifyCode(VerifyCodeViewModel)

Definition at line 228 of file AccountControllerTest.cs.

9.4.2.17 ResetPasswordTest01()

```
Task<ActionResult> BrewDay2.Controllers.Testsn.AccountControllerTest.ResetPasswordTest01 (
    [PexAssumeUnderTest] AccountController target,
    ResetPasswordViewModel model )
```

Test stub per ResetPassword(ResetPasswordViewModel)

Definition at line 192 of file AccountControllerTest.cs.

9.4.2.18 SendCodeTest()

```
Task<ActionResult> BrewDay2.Controllers.Testsn.AccountControllerTest.SendCodeTest (
    [PexAssumeUnderTest] AccountController target,
    string returnUrl,
    bool rememberMe )
```

Test stub per SendCode(String, Boolean)

Definition at line 204 of file AccountControllerTest.cs.

9.4.2.19 SendCodeTest01()

```
Task<ActionResult> BrewDay2.Controllers.Testsn.AccountControllerTest.SendCodeTest01 (
    [PexAssumeUnderTest] AccountController target,
    SendCodeViewModel model )
```

Test stub per SendCode(SendCodeViewModel)

Definition at line 217 of file AccountControllerTest.cs.

9.4.2.20 SignInManagerGetTest()

```
ApplicationSignInManager BrewDay2.Controllers.Testsn.AccountControllerTest.SignInManagerGet↔
Test (
    [PexAssumeUnderTest] AccountController target )
```

Test stub per get_SignInManager()

Definition at line 229 of file AccountControllerTest.cs.

9.4.2.21 UserManagerGetTest()

```
ApplicationUserManager BrewDay2.Controllers.Testsn.AccountControllerTest.UserManagerGetTest (
    [PexAssumeUnderTest] AccountController target )
```

Test stub per get_UserManager()

Definition at line 238 of file AccountControllerTest.cs.

9.4.2.22 VerifyCodeTest()

```
Task<ActionResult> BrewDay2.Controllers.Testsn.AccountControllerTest.VerifyCodeTest (
    [PexAssumeUnderTest] AccountController target,
    string provider,
    string returnUrl,
    bool rememberMe )
```

Test stub per VerifyCode(String, String, Boolean)

Definition at line 247 of file AccountControllerTest.cs.

9.4.2.23 VerifyCodeTest01()

```
Task<ActionResult> BrewDay2.Controllers.Testsn.AccountControllerTest.VerifyCodeTest01 (
    [PexAssumeUnderTest] AccountController target,
    VerifyCodeViewModel model )
```

Test stub per VerifyCode(VerifyCodeViewModel)

Definition at line 261 of file AccountControllerTest.cs.

9.8 BrewDay2.Controllers.AdditiviController Class Reference

Inheritance diagram for BrewDay2.Controllers.AdditiviController:

Public Member Functions

- ActionResult [Index](#) ()
Metodo invocato alla richiesta /Additivi/ Setta nella variabile speciale viewbag l'utente loggato e restituisce alla view una collection di additivi
- ActionResult [Details](#) (int? id)
Metodo invocato dalla richiesta di dettagli su un additivo Es: GET: Additivi/Details/5 Restituisce errore se id è nullo o non esiste a db Altrimenti restituisce l'elemento cercato alla pagina
- ActionResult [Create](#) ()
Metodo invocato alla creazione di un nuovo additivo Assegna uno user all'additivo con i campi da compilare nella view Ritorna la vista
- ActionResult [Create](#) ([Additivi](#) additivi)
Metodo invocato alla submit della form per la creazione di un Additivo Se il modello è valido, crea e aggiunge l'Additivo al database
- ActionResult [Edit](#) (int? id)
Metodo invocato alla modifica di un nuovo additivo Se l' ID è nullo ritorna uno StatusCode di BadRequest Se l' ID non è presente nel database ritorna HttpNotFound Se è presente ritorna la vista dell' Additivo trovato
- ActionResult [Edit](#) ([Bind(Include="Id,Nome,Descrizione,Produttore,Prezzo")] [Additivi](#) additivi)
Metodo invocato alla submit della form per la modifica di un Additivo Se il modello è valido sostituisce nelle database l' Additivo con quello modificato, salva i cambiamenti Ritorna la vista
- ActionResult [Delete](#) (int? id)
Metodo invocato alla cancellazione di un additivo Se l' ID è nullo ritorna uno StatusCode di BadRequest Se l' ID non è presente nel database ritorna HttpNotFound Se è presente ritorna la vista dell' Additivo trovato
- ActionResult [DeleteConfirmed](#) (int id)

Protected Member Functions

- override void [Dispose](#) (bool disposing)

9.8.1 Detailed Description

Definition at line 13 of file AdditiviController.cs.

9.8.2 Member Function Documentation

9.8.2.1 Create() [1/2]

```
ActionResult BrewDay2.Controllers.AdditiviController.Create ( )
```

Metodo invocato alla creazione di un nuovo additivo Assegna uno user all'additivo con i campi da compilare nella view Ritorna la vista

Returns

Definition at line 60 of file AdditiviController.cs.

9.8.2.2 Create() [2/2]

```
ActionResult BrewDay2.Controllers.AdditiviController.Create (
    Additivi additivi )
```

Metodo invocato alla submit della form per la creazione di un Additivo Se il modello è valido, crea e aggiunge l' Additivo al database

Parameters

<i>additivi</i>	Oggetto da inserire nel database
-----------------	----------------------------------

Returns

Definition at line 78 of file AdditiviController.cs.

9.8.2.3 Delete()

```
ActionResult BrewDay2.Controllers.AdditiviController.Delete (
    int? id )
```

Metodo invocato alla cancellazione di un additivo Se l' ID è nullo ritorna uno StatusCode di BadRequest Se l' ID non è presente nel database ritorna HttpNotFound Se è presente ritorna la vista dell' Additivo trovato

Parameters

<i>id</i>	Valore della chiave per il model Additivi
-----------	---

Returns

Definition at line 146 of file AdditiviController.cs.

9.8.2.4 DeleteConfirmed()

```
ActionResult BrewDay2.Controllers.AdditiviController.DeleteConfirmed (
    int id )
```

Metodo invocato alla submit della form per la cancellazione di un Additivo Se il modello è valido rimuove nel database l' Additivo e salva i cambiamenti Ritorna la vista

Parameters

<i>id</i>	Valore della chiave dell'additivo da eliminare
-----------	--

Returns

Definition at line 172 of file AdditiviController.cs.

9.8.2.5 Details()

```
ActionResult BrewDay2.Controllers.AdditiviController.Details (
    int? id )
```

Metodo invocato dalla richiesta di dettagli su un additivo Es: GET: Additivi/Details/5 Restituisce errore se id è nullo o non esiste a db Altrimenti restituisce l'elemento cercato alla pagina

Parameters

<i>id</i>	Valore della chiave per model Additivi
-----------	--

Returns

Definition at line 39 of file AdditiviController.cs.

9.8.2.6 Dispose()

```
override void BrewDay2.Controllers.AdditiviController.Dispose (
    bool disposing ) [protected]
```

Definition at line 180 of file AdditiviController.cs.

9.8.2.7 Edit() [1/2]

```
ActionResult BrewDay2.Controllers.AdditiviController.Edit (
    int? id )
```

Metodo invocato alla modifica di un nuovo additivo Se l' ID è nullo ritorna uno StatusCode di BadRequest Se l' ID non è presente nel database ritorna HttpNotFound Se è presente ritorna la vista dell' Additivo trovato

Parameters

<i>id</i>	Valore della chiave per il model Additivi
-----------	---

Returns

Definition at line 99 of file AdditiviController.cs.

9.8.2.8 Edit() [2/2]

```
ActionResult BrewDay2.Controllers.AdditiviController.Edit (
    [Bind(Include = "Id,Nome,Descrizione,Produttore,Prezzo")] Additivi additivi )
```

Metodo invocato alla submit della form per la modifica di un Additivo Se il modello è valido sostituisce nelle database l' Additivo con quello modificato, salva i cambiamenti Ritorna la vista

Parameters

<i>additivi</i>	Oggetto da modificare nel database
-----------------	------------------------------------

Returns

Definition at line 126 of file AdditiviController.cs.

9.8.2.9 Index()

```
ActionResult BrewDay2.Controllers.AdditiviController.Index ( )
```

Metodo invocato alla richiesta /Additivi/ Setta nella variabile speciale viewbag l'utente loggato e restituisce alla view una collection di additivi

Returns

Definition at line 24 of file AdditiviController.cs.

- ActionResult [IndexTest](#) ([PexAssumeUnderTest][HomeController](#) target)
Test stub per Index()

9.41.1 Detailed Description

Questa classe contiene unit test con parametri per [HomeController](#)

Definition at line 15 of file HomeControllerTest.cs.

9.41.2 Member Function Documentation

9.41.2.1 AboutTest()

```
ActionResult BrewDay2.Controllers.Tests.HomeControllerTest.AboutTest (
    [PexAssumeUnderTest] HomeController target )
```

Test stub per About()

Definition at line 29 of file HomeControllerTest.cs.

9.41.2.2 ConstructorTest()

```
HomeController BrewDay2.Controllers.Tests.HomeControllerTest.ConstructorTest ( )
```

Test stub per .ctor()

Definition at line 20 of file HomeControllerTest.cs.

9.41.2.3 ContactTest()

```
ActionResult BrewDay2.Controllers.Tests.HomeControllerTest.ContactTest (
    [PexAssumeUnderTest] HomeController target )
```

Test stub per Contact()

Definition at line 38 of file HomeControllerTest.cs.

9.41.2.4 IndexTest()

```
ActionResult BrewDay2.Controllers.Tests.HomeControllerTest.IndexTest (
    [PexAssumeUnderTest] HomeController target )
```

Test stub per Index()

Definition at line 47 of file HomeControllerTest.cs.

The documentation for this class was generated from the following file:

- BrewDay2.Tests01/[HomeControllerTest.cs](#)

9.42 BrewDay2.Controllers.Tests.HomeControllerTests Class Reference

Public Member Functions

- void [IndexTest](#) ()
- void [AboutTest](#) ()
- void [ContactTest](#) ()
- void [IndexTest1](#) ()
- void [AboutTest1](#) ()
- void [ContactTest1](#) ()

9.42.1 Detailed Description

Definition at line 12 of file HomeControllerTests.cs.

9.42.2 Member Function Documentation

9.42.2.1 AboutTest()

```
void BrewDay2.Controllers.Tests.HomeControllerTests.AboutTest ( )
```

Definition at line 21 of file HomeControllerTests.cs.

9.42.2.2 AboutTest1()

```
void BrewDay2.Controllers.Tests.HomeControllerTests.AboutTest1 ( )
```

Definition at line 39 of file HomeControllerTests.cs.

9.42.2.3 ContactTest()

```
void BrewDay2.Controllers.Tests.HomeControllerTests.ContactTest ( )
```

Definition at line 27 of file HomeControllerTests.cs.

9.42.2.4 ContactTest1()

```
void BrewDay2.Controllers.Tests.HomeControllerTests.ContactTest1 ( )
```

Definition at line 45 of file HomeControllerTests.cs.

9.42.2.5 IndexTest()

```
void BrewDay2.Controllers.Tests.HomeControllerTests.IndexTest ( )
```

Definition at line 15 of file HomeControllerTests.cs.

9.42.2.6 IndexTest1()

```
void BrewDay2.Controllers.Tests.HomeControllerTests.IndexTest1 ( )
```

Definition at line 33 of file HomeControllerTests.cs.

The documentation for this class was generated from the following file:

- [UnitTestProject/Controllers/HomeControllerTests.cs](#)

9.43 BrewDay2.Models.IndexViewModel Class Reference

Properties

- bool [HasPassword](#) [get, set]
- IList< UserLoginInfo > [Logins](#) [get, set]
- string [PhoneNumber](#) [get, set]
- bool [TwoFactor](#) [get, set]
- bool [BrowserRemembered](#) [get, set]

9.43.1 Detailed Description

Definition at line 8 of file ManageViewModels.cs.

9.43.2 Property Documentation

9.43.2.1 BrowserRemembered

```
bool BrewDay2.Models.IndexViewModel.BrowserRemembered [get], [set]
```

Definition at line 14 of file ManageViewModels.cs.

9.43.2.2 HasPassword

```
bool BrewDay2.Models.IndexViewModel.HasPassword [get], [set]
```

Definition at line 10 of file ManageViewModels.cs.

9.43.2.3 Logins

```
ICollection<UserLoginInfo> BrewDay2.Models.IndexViewModel.Logins [get], [set]
```

Definition at line 11 of file ManageViewModels.cs.

9.43.2.4 PhoneNumber

```
string BrewDay2.Models.IndexViewModel.PhoneNumber [get], [set]
```

Definition at line 12 of file ManageViewModels.cs.

9.43.2.5 TwoFactor

```
bool BrewDay2.Models.IndexViewModel.TwoFactor [get], [set]
```

Definition at line 13 of file ManageViewModels.cs.

The documentation for this class was generated from the following file:

- BrewDay2/Models/[ManageViewModels.cs](#)

9.44 BrewDay2.Tests.IndexViewModelTest Class Reference

Questa classe contiene unit test con parametri per IndexViewModel

9.44.1 Detailed Description

Questa classe contiene unit test con parametri per IndexViewModel

Definition at line 16 of file IndexViewModelTest.cs.

The documentation for this class was generated from the following file:

- BrewDay2.Tests/[IndexViewModelTest.cs](#)

9.45 BrewDay2.Models.Lieviti Class Reference

Properties

- int [Lievitild](#) [get, set]
- String [Nome](#) [get, set]
- String [Descrizione](#) [get, set]
- String [Produttore](#) [get, set]
- Decimal [Prezzo](#) [get, set]
- String [UserId](#) [get, set]
- virtual [ApplicationUser User](#) [get, set]

9.45.1 Detailed Description

Definition at line 8 of file Lieviti.cs.

9.45.2 Property Documentation

9.45.2.1 Descrizione

```
String BrewDay2.Models.Lieviti.Descrizione [get], [set]
```

Definition at line 15 of file Lieviti.cs.

9.45.2.2 Lievitild

```
int BrewDay2.Models.Lieviti.LievitiId [get], [set]
```

Definition at line 12 of file Lieviti.cs.

9.45.2.3 Nome

String BrewDay2.Models.Lieviti.Nome [get], [set]

Definition at line 14 of file Lieviti.cs.

9.45.2.4 Prezzo

Decimal BrewDay2.Models.Lieviti.Prezzo [get], [set]

Definition at line 17 of file Lieviti.cs.

9.45.2.5 Produttore

String BrewDay2.Models.Lieviti.Produttore [get], [set]

Definition at line 16 of file Lieviti.cs.

9.45.2.6 User

virtual [ApplicationUser](#) BrewDay2.Models.Lieviti.User [get], [set]

Definition at line 19 of file Lieviti.cs.

9.45.2.7 UserId

String BrewDay2.Models.Lieviti.UserId [get], [set]

Definition at line 18 of file Lieviti.cs.

The documentation for this class was generated from the following file:

- BrewDay2/Models/[Lieviti.cs](#)

9.46 BrewDay2.Models.LievitiMagazzino Class Reference

Properties

- int [Magazzinold](#) [get, set]
- int [Lievitild](#) [get, set]
- virtual [Magazzino](#) [Magazzino](#) [get, set]
- virtual [Lieviti](#) [Lievito](#) [get, set]
- Decimal [Quantita](#) [get, set]

9.46.1 Detailed Description

Definition at line 7 of file LievitiMagazzino.cs.

9.46.2 Property Documentation

9.46.2.1 Lievitild

```
int BrewDay2.Models.LievitiMagazzino.LievitiId [get], [set]
```

Definition at line 12 of file LievitiMagazzino.cs.

9.46.2.2 Lievito

```
virtual Lieviti BrewDay2.Models.LievitiMagazzino.Lievito [get], [set]
```

Definition at line 14 of file LievitiMagazzino.cs.

9.46.2.3 Magazzino

```
virtual Magazzino BrewDay2.Models.LievitiMagazzino.Magazzino [get], [set]
```

Definition at line 13 of file LievitiMagazzino.cs.

9.46.2.4 MagazzinoId

```
int BrewDay2.Models.LievitiMagazzino.MagazzinoId [get], [set]
```

Definition at line 10 of file LievitiMagazzino.cs.

9.46.2.5 Quantita

```
Decimal BrewDay2.Models.LievitiMagazzino.Quantita [get], [set]
```

Definition at line 15 of file LievitiMagazzino.cs.

The documentation for this class was generated from the following file:

- BrewDay2/Models/[LievitiMagazzino.cs](#)

9.47 BrewDay2.Models.LievitiRicetta Class Reference

Properties

- int [Ricettald](#) [get, set]
- int [Lievitold](#) [get, set]
- virtual [Ricette Ricetta](#) [get, set]
- virtual [Lieviti Lievito](#) [get, set]
- Decimal [Quantita](#) [get, set]

9.47.1 Detailed Description

Definition at line 7 of file LievitiRicetta.cs.

9.47.2 Property Documentation

9.47.2.1 Lievito

```
virtual Lieviti BrewDay2.Models.LievitiRicetta.Lievito [get], [set]
```

Definition at line 14 of file LievitiRicetta.cs.

9.47.2.2 Lievitold

```
int BrewDay2.Models.LievitiRicetta.LievitoId [get], [set]
```

Definition at line 12 of file LievitiRicetta.cs.

9.47.2.3 Quantita

```
Decimal BrewDay2.Models.LievitiRicetta.Quantita [get], [set]
```

Definition at line 15 of file LievitiRicetta.cs.

9.47.2.4 Ricetta

```
virtual Ricette BrewDay2.Models.LievitiRicetta.Ricetta [get], [set]
```

Definition at line 13 of file LievitiRicetta.cs.

9.47.2.5 Ricettald

```
int BrewDay2.Models.LievitiRicetta.RicettaId [get], [set]
```

Definition at line 10 of file LievitiRicetta.cs.

The documentation for this class was generated from the following file:

- BrewDay2/Models/[LievitiRicetta.cs](#)

9.48 BrewDay2.Tests.LievitiRicettaTest Class Reference

Questa classe contiene unit test con parametri per LievitiRicetta

9.48.1 Detailed Description

Questa classe contiene unit test con parametri per LievitiRicetta

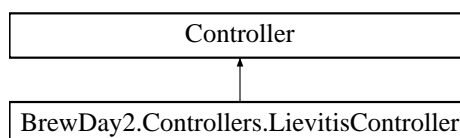

Definition at line 16 of file LievitiRicettaTest.cs.

The documentation for this class was generated from the following file:

- BrewDay2.Tests/[LievitiRicettaTest.cs](#)

9.49 BrewDay2.Controllers.LievitisController Class Reference

Inheritance diagram for BrewDay2.Controllers.LievitisController:

Public Member Functions

- ActionResult [Index](#) ()
Metodo invocato alla richiesta di Lievitis Setta nella variabile speciale ViewBag l'utente loggato e restituisce alla view una lista di lieviti
- ActionResult [Details](#) (int? id)
Metodo invocato alla richiesta di dettagli su un lievito Restituisce errore se id è nullo o non esiste Altrimenti restituisce l'elemento cercato alla pagina
- ActionResult [Create](#) ()
Metodo invocato alla creazione di un nuovo lievito Assegna uno user al lievito con i campi da compilare nella view Ritorna la vista
- ActionResult [Create](#) ([Bind(Include="Id,Nome,Descrizione,Produttore,Prezzo")] Lieviti lieviti)
Metodo invocato alla submit della form per la creazione di un Lievitis Se il modello è valido, crea e aggiunge il lievito al database
- ActionResult [Edit](#) (int? id)
Metodo invocato alla modifica di un nuovo lievito Se l' ID è nullo ritorna uno StatusCode di BadRequest Se l' ID non è presente nel database ritorna HttpNotFound Se è presente ritorna la vista del Lievitis trovato
- ActionResult [Edit](#) ([Bind(Include="Id,Nome,Descrizione,Produttore,Prezzo")] Lieviti lieviti)
Metodo invocato alla submit della form per la modifica di un lievito Se il modello è valido sostituisce nelle database il lievito con quello modificato, salva i cambiamenti Ritorna la vista
- ActionResult [Delete](#) (int? id)
Metodo invocato alla cancellazione di un lievito Se l' ID è nullo ritorna uno StatusCode di BadRequest Se l' ID non è presente nel database ritorna HttpNotFound Se è presente ritorna la vista del lievito trovato
- ActionResult [DeleteConfirmed](#) (int id)
Metodo invocato alla submit della form per la cancellazione di un lievito Se il modello è valido rimuove nel database il lievito e salva i cambiamenti Ritorna la vista

Protected Member Functions

- override void [Dispose](#) (bool disposing)

9.49.1 Detailed Description

Definition at line 13 of file LievitisController.cs.

9.49.2 Member Function Documentation

9.49.2.1 [Create\(\)](#) [1/2]

```
ActionResult BrewDay2.Controllers.LievitisController.Create ( )
```

Metodo invocato alla creazione di un nuovo lievito Assegna uno user al lievito con i campi da compilare nella view
Ritorna la vista

Returns

Definition at line 60 of file LievitisController.cs.

9.49.2.2 Create() [2/2]

```
ActionResult BrewDay2.Controllers.LievitisController.Create (
    [Bind(Include = "Id, Nome, Descrizione, Produttore, Prezzo")] Lieviti lieviti )
```

Metodo invocato alla submit della form per la creazione di un Lievitis Se il modello è valido, crea e aggiunge il lievito al database

Parameters

<i>lieviti</i>	Oggetto da inserire nel database
----------------	----------------------------------

Returns

Definition at line 77 of file LievitisController.cs.

9.49.2.3 Delete()

```
ActionResult BrewDay2.Controllers.LievitisController.Delete (
    int? id )
```

Metodo invocato alla cancellazione di un lievito Se l' ID è nullo ritorna uno StatusCode di BadRequest Se l' ID non è presente nel database ritorna HttpNotFound Se è presente ritorna la vista del lievito trovato

Parameters

<i>id</i>	Valore della chiave per il model Lievitis
-----------	---

Returns

Definition at line 144 of file LievitisController.cs.

9.49.2.4 DeleteConfirmed()

```
ActionResult BrewDay2.Controllers.LievitisController.DeleteConfirmed (
    int id )
```

Metodo invocato alla submit della form per la cancellazione di un lievito Se il modello è valido rimuove nel database il lievito e salva i cambiamenti Ritorna la vista

Parameters

<i>id</i>	Valore della chiave del lievito da eliminare
-----------	--

Returns

Definition at line 169 of file LievitisController.cs.

9.49.2.5 Details()

```
ActionResult BrewDay2.Controllers.LievitisController.Details (
    int? id )
```

Metodo invocato alla richiesta di dettagli su un lievito Restituisce errore se id è nullo o non esiste Altrimenti restituisce l'elemento cercato alla pagina

Parameters

<i>id</i>	Valore della chiave per model Lievitis
-----------	--

Returns

Definition at line 38 of file LievitisController.cs.

9.49.2.6 Dispose()

```
override void BrewDay2.Controllers.LievitisController.Dispose (
    bool disposing ) [protected]
```

Definition at line 177 of file LievitisController.cs.

9.49.2.7 Edit() [1/2]

```
ActionResult BrewDay2.Controllers.LievitisController.Edit (
    int? id )
```

Metodo invocato alla modifica di un nuovo lievito Se l' ID è nullo ritorna uno StatusCode di BadRequest Se l' ID non è presente nel database ritorna HttpNotFound Se è presente ritorna la vista del Lievitis trovato

Parameters

<i>id</i>	Valore della chiave per il model Lievitis
-----------	---

Returns

Definition at line 98 of file LievitisController.cs.

9.49.2.8 Edit() [2/2]

```
ActionResult BrewDay2.Controllers.LievitisController.Edit (
    [Bind(Include = "Id, Nome, Descrizione, Produttore, Prezzo")] Lieviti lieviti )
```

Metodo invocato alla submit della form per la modifica di un lievito Se il modello è valido sostituisce nelle database il lievito con quello modificato, salva i cambiamenti Ritorna la vista

Parameters

<i>lieviti</i>	Oggetto da modificare nel database
----------------	------------------------------------

Returns

Definition at line 124 of file LievitisController.cs.

9.49.2.9 Index()

```
ActionResult BrewDay2.Controllers.LievitisController.Index ( )
```

Metodo invocato alla richiesta di Lievitis Setta nella variabile speciale ViewBag l'utente loggato e restituisce alla view una lista di lieviti

Returns

Definition at line 24 of file LievitisController.cs.

The documentation for this class was generated from the following file:

- BrewDay2/Controllers/[LievitisController.cs](#)

9.50 BrewDay2.Tests.LievitisControllerTest Class Reference

Questa classe contiene unit test con parametri per LievitisController

Public Member Functions

- [LievitisController ConstructorTest](#) ()
Test stub per .ctor()
- ActionResult [CreateTest](#) ([PexAssumeUnderTest][LievitisController](#) target)
Test stub per Create()

Questa classe contiene unit test con parametri per LoginViewModel

Definition at line 16 of file LoginViewModelTest.cs.

The documentation for this class was generated from the following file:

- BrewDay2.Tests/[LoginViewModelTest.cs](#)

9.56 BrewDay2.Models.Luppoli Class Reference

Properties

- int [LuppoliId](#) [get, set]
- String [Nome](#) [get, set]
- String [Descrizione](#) [get, set]
- String [Produttore](#) [get, set]
- Decimal [Prezzo](#) [get, set]
- String [UserId](#) [get, set]
- virtual [ApplicationUser User](#) [get, set]

9.56.1 Detailed Description

Definition at line 8 of file Luppoli.cs.

9.56.2 Property Documentation

9.56.2.1 Descrizione

```
String BrewDay2.Models.Luppoli.Descrizione [get], [set]
```

Definition at line 15 of file Luppoli.cs.

9.56.2.2 LuppoliId

```
int BrewDay2.Models.Luppoli.LuppoliId [get], [set]
```

Definition at line 12 of file Luppoli.cs.

9.56.2.3 Nome

```
String BrewDay2.Models.Luppoli.Nome [get], [set]
```

Definition at line 14 of file Luppoli.cs.

9.56.2.4 Prezzo

```
Decimal BrewDay2.Models.Luppoli.Prezzo [get], [set]
```

Definition at line 17 of file Luppoli.cs.

9.56.2.5 Produttore

```
String BrewDay2.Models.Luppoli.Produttore [get], [set]
```

Definition at line 16 of file Luppoli.cs.

9.56.2.6 User

```
virtual ApplicationUser BrewDay2.Models.Luppoli.User [get], [set]
```

Definition at line 19 of file Luppoli.cs.

9.56.2.7 UserId

`String BrewDay2.Models.Luppoli.UserId [get], [set]`

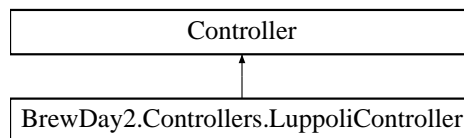

Definition at line 18 of file Luppoli.cs.

The documentation for this class was generated from the following file:

- [BrewDay2/Models/Luppoli.cs](#)

9.57 BrewDay2.Controllers.LuppoliController Class Reference

Inheritance diagram for BrewDay2.Controllers.LuppoliController:

Public Member Functions

- `ActionResult` [Index](#) ()
Metodo invocato alla richiesta di Luppoli Setta nella variabile speciale ViewBag l'utente loggato e restituisce alla view una lista di luppoli
- `ActionResult` [Details](#) (int? id)
Metodo invocato alla richiesta di dettagli su un luppolo Restituisce errore se id è nullo o non esiste Altrimenti restituisce l'elemento cercato alla pagina
- `ActionResult` [Create](#) ()
Metodo invocato alla creazione di un nuovo luppolo Assegna uno user al luppolo con i campi da compilare nella view Ritorna la vista
- `ActionResult` [Create](#) ([Bind(Include="Id,Nome,Descrizione,Produttore,Prezzo")] Luppoli luppoli)
Metodo invocato alla submit della form per la creazione di un Luppolo Se il modello è valido, crea e aggiunge il luppolo al database
- `ActionResult` [Edit](#) (int? id)
Metodo invocato alla modifica di un nuovo luppolo Se l' ID è nullo ritorna uno StatusCode di BadRequest Se l' ID non è presente nel database ritorna HttpNotFound Se è presente ritorna la vista del Luppoli trovato
- `ActionResult` [Edit](#) ([Bind(Include="Id,Nome,Descrizione,Produttore,Prezzo")] Luppoli luppoli)
Metodo invocato alla submit della form per la modifica di un luppolo Se il modello è valido sostituisce nelle database il luppolo con quello modificato, salva i cambiamenti Ritorna la vista
- `ActionResult` [Delete](#) (int? id)
Metodo invocato alla cancellazione di un luppolo Se l' ID è nullo ritorna uno StatusCode di BadRequest Se l' ID non è presente nel database ritorna HttpNotFound Se è presente ritorna la vista del luppolo trovato
- `ActionResult` [DeleteConfirmed](#) (int id)
Metodo invocato alla submit della form per la cancellazione di un luppolo Se il modello è valido rimuove nel database il luppolo e salva i cambiamenti Ritorna la vista

Protected Member Functions

- override void [Dispose](#) (bool disposing)

9.57.1 Detailed Description

Definition at line 13 of file LuppoliController.cs.

9.57.2 Member Function Documentation

9.57.2.1 Create() [1/2]

```
ActionResult BrewDay2.Controllers.LuppoliController.Create ( )
```

Metodo invocato alla creazione di un nuovo luppolo Assegna uno user al luppolo con i campi da compilare nella view Ritorna la vista

Returns

Definition at line 59 of file LuppoliController.cs.

9.57.2.2 Create() [2/2]

```
ActionResult BrewDay2.Controllers.LuppoliController.Create (
    [Bind(Include = "Id, Nome, Descrizione, Produttore, Prezzo")] Luppoli luppoli )
```

Metodo invocato alla submit della form per la creazione di un Luppolo Se il modello è valido, crea e aggiunge il luppolo al database

Parameters

<i>luppoli</i>	Oggetto da inserire nel database
----------------	----------------------------------

Returns

Definition at line 76 of file LuppoliController.cs.

9.57.2.3 Delete()

```
ActionResult BrewDay2.Controllers.LuppoliController.Delete (
    int? id )
```

Metodo invocato alla cancellazione di un luppolo Se l' ID è nullo ritorna uno StatusCode di BadRequest Se l' ID non è presente nel database ritorna HttpNotFound Se è presente ritorna la vista del luppolo trovato

Parameters

<i>id</i>	Valore della chiave per il model Luppoli
-----------	--

Returns

Definition at line 144 of file LuppoliController.cs.

9.57.2.4 DeleteConfirmed()

```
ActionResult BrewDay2.Controllers.LuppoliController.DeleteConfirmed (  
    int id )
```

Metodo invocato alla submit della form per la cancellazione di un luppolo Se il modello è valido rimuove nel database il luppolo e salva i cambiamenti Ritorna la vista

Parameters

<i>id</i>	Valore della chiave del luppolo da eliminare
-----------	--

Returns

Definition at line 169 of file LuppoliController.cs.

9.57.2.5 Details()

```
ActionResult BrewDay2.Controllers.LuppoliController.Details (  
    int? id )
```

Metodo invocato alla richiesta di dettagli su un luppolo Restituisce errore se id è nullo o non esiste Altrimenti restituisce l'elemento cercato alla pagina

Parameters

<i>id</i>	Valore della chiave per model Luppoli
-----------	---------------------------------------

Returns

Definition at line 38 of file LuppoliController.cs.

9.57.2.6 Dispose()

```
override void BrewDay2.Controllers.LuppoliController.Dispose (
    bool disposing ) [protected]
```

Definition at line 177 of file LuppoliController.cs.

9.57.2.7 Edit() [1/2]

```
ActionResult BrewDay2.Controllers.LuppoliController.Edit (
    int? id )
```

Metodo invocato alla modifica di un nuovo luppolo Se l' ID è nullo ritorna uno StatusCode di BadRequest Se l' ID non è presente nel database ritorna HttpNotFound Se è presente ritorna la vista del Luppoli trovato

Parameters

<i>id</i>	Valore della chiave per il model Luppoli
-----------	--

Returns

Definition at line 97 of file LuppoliController.cs.

9.57.2.8 Edit() [2/2]

```
ActionResult BrewDay2.Controllers.LuppoliController.Edit (
    [Bind(Include = "Id,Nome,Descrizione,Produttore,Prezzo")] Luppoli luppoli )
```

Metodo invocato alla submit della form per la modifica di un luppolo Se il modello è valido sostituisce nelle database il luppolo con quello modificato, salva i cambiamenti Ritorna la vista

Parameters

<i>luppoli</i>	Oggetto da modificare nel database
----------------	------------------------------------

Returns

Definition at line 124 of file LuppoliController.cs.

9.57.2.9 Index()

```
ActionResult BrewDay2.Controllers.LuppoliController.Index ( )
```

Metodo invocato alla richiesta di Luppoli Setta nella variabile speciale ViewBag l'utente loggato e restituisce alla view una lista di luppoli

Returns

Definition at line 24 of file LuppoliController.cs.

The documentation for this class was generated from the following file:

- BrewDay2/Controllers/[LuppoliController.cs](#)

9.58 BrewDay2.Tests.LuppoliControllerTest Class Reference

Questa classe contiene unit test con parametri per LuppoliController

Public Member Functions

- [LuppoliController ConstructorTest](#) ()
Test stub per .ctor()
- ActionResult [CreateTest](#) ([PexAssumeUnderTest][LuppoliController](#) target)
Test stub per Create()
- ActionResult [CreateTest01](#) ([PexAssumeUnderTest][LuppoliController](#) target, [Luppoli](#) luppoli)
Test stub per Create(Luppoli)
- ActionResult [DeleteTest](#) ([PexAssumeUnderTest][LuppoliController](#) target, int? id)
Test stub per Delete(Nullable`1<Int32>)
- ActionResult [DeleteConfirmedTest](#) ([PexAssumeUnderTest][LuppoliController](#) target, int id)
Test stub per DeleteConfirmed(Int32)

Test stub per Edit(Luppoli)
- ActionResult [IndexTest](#) ([PexAssumeUnderTest][LuppoliController](#) target)
Test stub per Index()

9.58.1 Detailed Description

Questa classe contiene unit test con parametri per LuppoliController

Definition at line 18 of file LuppoliControllerTest.cs.

9.58.2 Member Function Documentation

9.58.2.1 ConstructorTest()

```
LuppoliController BrewDay2.Tests.LuppoliControllerTest.ConstructorTest ( )
```

Test stub per .ctor()

Definition at line 23 of file LuppoliControllerTest.cs.

9.58.2.2 CreateTest()

```
ActionResult BrewDay2.Tests.LuppoliControllerTest.CreateTest (
    [PexAssumeUnderTest] LuppoliController target )
```

Test stub per Create()

Definition at line 32 of file LuppoliControllerTest.cs.

9.58.2.3 CreateTest01()

```
ActionResult BrewDay2.Tests.LuppoliControllerTest.CreateTest01 (
    [PexAssumeUnderTest] LuppoliController target,
    Luppoli luppoli )
```

Test stub per Create(Luppoli)

Definition at line 41 of file LuppoliControllerTest.cs.

9.58.2.4 DeleteConfirmedTest()

```
ActionResult BrewDay2.Tests.LuppoliControllerTest.DeleteConfirmedTest (
    [PexAssumeUnderTest] LuppoliController target,
    int id )
```

Test stub per DeleteConfirmed(Int32)

Definition at line 59 of file LuppoliControllerTest.cs.

9.58.2.5 DeleteTest()

```
ActionResult BrewDay2.Tests.LuppoliControllerTest.DeleteTest (
    [PexAssumeUnderTest] LuppoliController target,
    int? id )
```

Test stub per Delete(Nullable`1<Int32>)

Definition at line 50 of file LuppoliControllerTest.cs.

9.58.2.6 DetailsTest()

```
ActionResult BrewDay2.Tests.LuppoliControllerTest.DetailsTest (
    [PexAssumeUnderTest] LuppoliController target,
    int? id )
```

Test stub per Details(Nullable`1<Int32>)

Definition at line 68 of file LuppoliControllerTest.cs.

9.58.2.7 EditTest()

```
ActionResult BrewDay2.Tests.LuppoliControllerTest.EditTest (
    [PexAssumeUnderTest] LuppoliController target,
    int? id )
```

Test stub per Edit(Nullable`1<Int32>)

Definition at line 77 of file LuppoliControllerTest.cs.

9.58.2.8 EditTest01()

```
ActionResult BrewDay2.Tests.LuppoliControllerTest.EditTest01 (
    [PexAssumeUnderTest] LuppoliController target,
    Luppoli luppoli )
```

Test stub per Edit(Luppoli)

Definition at line 86 of file LuppoliControllerTest.cs.

9.58.2.9 IndexTest()

```
ActionResult BrewDay2.Tests.LuppoliControllerTest.IndexTest (
    [PexAssumeUnderTest] LuppoliController target )
```

Test stub per Index()

Definition at line 95 of file LuppoliControllerTest.cs.

The documentation for this class was generated from the following file:

- BrewDay2/Models/[Magazzino.cs](#)

9.66 BrewDay2.Controllers.MagazzinoController Class Reference

Inheritance diagram for BrewDay2.Controllers.MagazzinoController:

Public Member Functions

- ActionResult [Index](#) ()
Metodo invocato alla richiesta di visualizzazione del Magazzino Setta nella variabile speciale ViewBag lo Username e ritorna la sua vista specifica confrontando gli ID
- ActionResult [Details](#) (int? id)
Metodo invocato alla richiesta di dettagli sul magazzino Restituisce errore se id è nullo o non esiste Altrimenti restituisce l'elemento cercato alla pagina
- ActionResult [Create](#) ()
Metodo invocato alla creazione di un magazzino Crea un nuovo oggetto Magazzino Assegna a UserId l' ID dell' utente loggato Ritorna la vista
- ActionResult [Create](#) ([Bind(Include="Magazzinold,UserId")] Magazzino magazzino)
Metodo invocato alla submit della form per la creazione di un Magazzino Se il modello è valido, crea e aggiunge il magazzino al database
- ActionResult [Edit](#) (int? id)
- ActionResult [Edit](#) ([Bind(Include="Magazzinold,UserId")] Magazzino magazzino)
Metodo invocato alla submit della form per la modifica di un magazzino Se il modello è valido sostituisce nelle database il magazzino con quello modificato, salva i cambiamenti Ritorna la vista
- ActionResult [AggiungiAdditivo](#) ()
Metodo invocato all' aggiunta di un nuovo additivo nel magazzino Crea un nuovo AdditiviMagazzino assegnandolo al magazzino collegato all' ID dell' utente Assegna la lista di additivi alla variabile speciale ViewBag Ritorna la vista di AdditiviMagazzino
- ActionResult [AggiungiLievito](#) ()
- ActionResult [AggiungiLuppolo](#) ()
- ActionResult [AggiungiMalti](#) ()
- ActionResult [AggiungiZucchero](#) ()
- ActionResult [AggiungiAdditivo](#) (AdditiviMagazzino am)
Metodo invocato alla submit della form per l'aggiunto di un additivo nel magazzino Se il modello è valido, aggiunge il nuovo additivo al magazzino e salva i cambiamenti Assegna l'AdditiviMagazzino al magazzino collegato all' ID dell' utente Ritorna la vista
- ActionResult [AggiungiLievito](#) (LievitiMagazzino lm)
- ActionResult [AggiungiLuppolo](#) (LuppoliMagazzino am)
- ActionResult [AggiungiMalti](#) (MaltiMagazzino am)
- ActionResult [AggiungiZucchero](#) (ZuccheriMagazzino am)
- ActionResult [EditAdditivo](#) (int id, int idr)
Metodo invocato alla modifica di un additivo nella ricetta Cerca nel database l'additivo e la ricetta passati come parametri Ritorna la vista
- ActionResult [EditAdditivo](#) (AdditiviMagazzino ar)
Metodo invocato alla submit della form per la modifica di un additivo nella ricetta Cerca nel database l'additivo e ne aggiorna la quantità Assegna alla variabile speciale ViewBag l'additivo modificato e ne ritorna la vista
- ActionResult [EditLievito](#) (int id, int idr)
Metodo invocato alla modifica di un lievito nella ricetta Cerca nel database il lievito e la ricetta passati come parametri Ritorna la vista
- ActionResult [EditLievito](#) (LievitiMagazzino lr)
Metodo invocato alla submit della form per la modifica di un lievito nella ricetta Cerca nel database il lievito e ne aggiorna la quantità Assegna alla variabile speciale ViewBag il lievito modificato e ne ritorna la vista
- ActionResult [EditLuppolo](#) (int id, int idr)
Metodo invocato alla modifica di un luppolo nella ricetta Cerca nel database il luppolo e la ricetta passati come parametri Ritorna la vista
- ActionResult [EditLuppolo](#) (LuppoliMagazzino lr)
Metodo invocato alla submit della form per la modifica di un luppolo nella ricetta Cerca nel database il luppolo e ne aggiorna la quantità Assegna alla variabile speciale ViewBag il luppolo modificato e ne ritorna la vista
- ActionResult [EditMalti](#) (int id, int idr)
Metodo invocato alla modifica di un malto nella ricetta Cerca nel database il malto e la ricetta passati come parametri Ritorna la vista

- ActionResult [EditMalti](#) ([MaltiMagazzino](#) mr)
Metodo invocato alla submit della form per la modifica di un malto nella ricetta Cerca nel database il malto e ne aggiorna la quantità Assegna alla variabile speciale ViewBag il malto modificato e ne ritorna la vista
- ActionResult [EditZuccheri](#) (int id, int idr)
Metodo invocato alla modifica di uno zucchero nella ricetta Cerca nel database lo zucchero e la ricetta passati come parametri Ritorna la vista
- ActionResult [EditZuccheri](#) ([ZuccheriMagazzino](#) zr)
Metodo invocato alla submit della form per la modifica di uno zucchero nella ricetta Cerca nel database lo zucchero e ne aggiorna la quantità Assegna alla variabile speciale ViewBag lo zucchero modificato e ne ritorna la vista

Protected Member Functions

- override void [Dispose](#) (bool disposing)
Metodo invocato alla cancellazione del database Se il flag è true, cancella il database

9.66.1 Detailed Description

Definition at line 11 of file `MagazzinoController.cs`.

9.66.2 Member Function Documentation

9.66.2.1 [AggiungiAdditivo\(\)](#) [1/2]

```
ActionResult BrewDay2.Controllers.MagazzinoController.AggiungiAdditivo ( )
```

Metodo invocato all' aggiunta di un nuovo additivo nel magazzino Crea un nuovo `AdditiviMagazzino` assegnandolo al magazzino collegato all' ID dell' utente Assegna la lista di additivi alla variabile speciale ViewBag Ritorna la vista di `AdditiviMagazzino`

Returns

Definition at line 153 of file `MagazzinoController.cs`.

9.66.2.2 [AggiungiAdditivo\(\)](#) [2/2]

```
ActionResult BrewDay2.Controllers.MagazzinoController.AggiungiAdditivo (
    AdditiviMagazzino am )
```

Metodo invocato alla submit della form per l'aggiunto di un additivo nel magazzino Se il modello è valido, aggiunge il nuovo additivo al magazzino e salva i cambiamenti Assegna l'`AdditiviMagazzino` al magazzino collegato all' ID dell' utente Ritorna la vista

Parameters

<i>am</i>	Additivo da aggiungere al magazzino
-----------	-------------------------------------

Returns

Definition at line 237 of file MagazzinoController.cs.

9.66.2.3 AggiungiLievito() [1/2]

```
ActionResult BrewDay2.Controllers.MagazzinoController.AggiungiLievito ( )
```

Definition at line 168 of file MagazzinoController.cs.

9.66.2.4 AggiungiLievito() [2/2]

```
ActionResult BrewDay2.Controllers.MagazzinoController.AggiungiLievito (
    LievitiMagazzino lm )
```

Definition at line 256 of file MagazzinoController.cs.

9.66.2.5 AggiungiLuppolo() [1/2]

```
ActionResult BrewDay2.Controllers.MagazzinoController.AggiungiLuppolo ( )
```

Definition at line 183 of file MagazzinoController.cs.

9.66.2.6 AggiungiLuppolo() [2/2]

```
ActionResult BrewDay2.Controllers.MagazzinoController.AggiungiLuppolo (
    LuppoliMagazzino am )
```

Definition at line 275 of file MagazzinoController.cs.

9.66.2.7 AggiungiMalti() [1/2]

```
ActionResult BrewDay2.Controllers.MagazzinoController.AggiungiMalti ( )
```

Definition at line 198 of file MagazzinoController.cs.

9.66.2.8 AggiungiMalti() [2/2]

```
ActionResult BrewDay2.Controllers.MagazzinoController.AggiungiMalti (
    MaltiMagazzino am )
```

Definition at line 294 of file MagazzinoController.cs.

9.66.2.9 AggiungiZucchero() [1/2]

```
ActionResult BrewDay2.Controllers.MagazzinoController.AggiungiZucchero ( )
```

Definition at line 213 of file MagazzinoController.cs.

9.66.2.10 AggiungiZucchero() [2/2]

```
ActionResult BrewDay2.Controllers.MagazzinoController.AggiungiZucchero (
    ZuccheriMagazzino am )
```

Definition at line 313 of file MagazzinoController.cs.

9.66.2.11 Create() [1/2]

```
ActionResult BrewDay2.Controllers.MagazzinoController.Create ( )
```

Metodo invocato alla creazione di un magazzino Crea un nuovo oggetto Magazzino Assegna a UserId l' ID dell' utente loggato Ritorna la vista

Returns

Definition at line 67 of file MagazzinoController.cs.

9.66.2.12 Create() [2/2]

```
ActionResult BrewDay2.Controllers.MagazzinoController.Create (
    [Bind(Include = "MagazzinoId,UserId")] Magazzino magazzino )
```

Metodo invocato alla submit della form per la creazione di un Magazzino Se il modello è valido, crea e aggiunge il magazzino al database

Parameters

<i>magazzino</i>	Oggetto da inserire nel database
------------------	----------------------------------

Returns

Definition at line 88 of file MagazzinoController.cs.

9.66.2.13 Details()

```
ActionResult BrewDay2.Controllers.MagazzinoController.Details (
    int? id )
```

Metodo invocato alla richiesta di dettagli sul magazzino Restituisce errore se id è nullo o non esiste Altrimenti restituisce l'elemento cercato alla pagina

Parameters

<i>id</i>	Valore della chiave per model Magazzino
-----------	---

Returns

Definition at line 44 of file MagazzinoController.cs.

9.66.2.14 Dispose()

```
override void BrewDay2.Controllers.MagazzinoController.Dispose (
    bool disposing ) [protected]
```

Metodo invocato alla cancellazione del database Se il flag è true, cancella il database

Parameters

<i>disposing</i>	Flag utilizzato per cancellare il database
------------------	--

Definition at line 514 of file MagazzinoController.cs.

9.66.2.15 Edit() [1/2]

```
ActionResult BrewDay2.Controllers.MagazzinoController.Edit (
    int? id )
```

Metodo invocato alla modifica di un magazzino Se l' ID è nullo ritorna uno StatusCode di BadRequest Se l' ID non è presente nel database ritorna HttpNotFound Se è presente ritorna la vista del Magazzino trovato

Parameters

<i>id</i>	Valore della chiave per il model Magazzino
-----------	--

Returns

Definition at line 107 of file MagazzinoController.cs.

9.66.2.16 Edit() [2/2]

```
ActionResult BrewDay2.Controllers.MagazzinoController.Edit (
    [Bind(Include = "MagazzinoId,UserId")] Magazzino magazzino )
```

Metodo invocato alla submit della form per la modifica di un magazzino Se il modello è valido sostituisce nelle database il magazzino con quello modificato, salva i cambiamenti Ritorna la vista

Parameters

<i>magazzino</i>	Oggetto da modificare nel database
------------------	------------------------------------

Returns

Definition at line 133 of file MagazzinoController.cs.

9.66.2.17 EditAdditivo() [1/2]

```
ActionResult BrewDay2.Controllers.MagazzinoController.EditAdditivo (
    int id,
    int idr )
```

Metodo invocato alla modifica di un additivo nella ricetta Cerca nel database l'additivo e la ricetta passati come parametri Ritorna la vista

Parameters

<i>id</i>	ID dell'additivo da modificare
<i>idr</i>	ID della ricetta da modificare

Returns

Definition at line 339 of file MagazzinoController.cs.

9.66.2.18 EditAdditivo() [2/2]

```
ActionResult BrewDay2.Controllers.MagazzinoController.EditAdditivo (
    AdditiviMagazzino ar )
```

Metodo invocato alla submit della form per la modifica di un additivo nella ricetta Cerca nel database l'additivo e ne aggiorna la quantità Assegna alla variabile speciale ViewBag l'additivo modificato e ne ritorna la vista

Parameters

<i>ar</i>	Additivo da modificare nella ricetta
-----------	--------------------------------------

Returns

Definition at line 354 of file MagazzinoController.cs.

9.66.2.19 EditLievito() [1/2]

```
ActionResult BrewDay2.Controllers.MagazzinoController.EditLievito (
    int id,
    int idr )
```

Metodo invocato alla modifica di un lievito nella ricetta Cerca nel database il lievito e la ricetta passati come parametri Ritorna la vista

Parameters

<i>id</i>	ID del lievito da modificare
<i>idr</i>	ID della ricetta da modificare

Returns

Definition at line 376 of file MagazzinoController.cs.

9.66.2.20 EditLievito() [2/2]

```
ActionResult BrewDay2.Controllers.MagazzinoController.EditLievito (
    LievitiMagazzino lr )
```

Metodo invocato alla submit della form per la modifica di un lievito nella ricetta Cerca nel database il lievito e ne aggiorna la quantità Assegna alla variabile speciale ViewBag il lievito modificato e ne ritorna la vista

Parameters

<i>lr</i>	Lievito da modificare nella ricetta
-----------	-------------------------------------

Returns

Definition at line 390 of file MagazzinoController.cs.

9.66.2.21 EditLuppolo() [1/2]

```
ActionResult BrewDay2.Controllers.MagazzinoController.EditLuppolo (
    int id,
    int idr )
```

Metodo invocato alla modifica di un luppolo nella ricetta Cerca nel database il luppolo e la ricetta passati come parametri Ritorna la vista

Parameters

<i>id</i>	ID del luppolo da modificare
<i>idr</i>	ID della ricetta da modificare

Returns

Definition at line 412 of file MagazzinoController.cs.

9.66.2.22 EditLuppolo() [2/2]

```
ActionResult BrewDay2.Controllers.MagazzinoController.EditLuppolo (
    LuppoliMagazzino lr )
```

Metodo invocato alla submit della form per la modifica di un luppolo nella ricetta Cerca nel database il luppolo e ne aggiorna la quantità Assegna alla variabile speciale ViewBag il luppolo modificato e ne ritorna la vista

Parameters

<i>lr</i>	Luppolo da modificare nella ricetta
-----------	-------------------------------------

Returns

Definition at line 426 of file MagazzinoController.cs.

9.66.2.23 EditMalti() [1/2]

```
ActionResult BrewDay2.Controllers.MagazzinoController.EditMalti (
    int id,
    int idr )
```

Metodo invocato alla modifica di un malto nella ricetta Cerca nel database il malto e la ricetta passati come parametri Ritorna la vista

Parameters

<i>id</i>	ID del malto da modificare
<i>idr</i>	ID della ricetta da modificare

Returns

Definition at line 446 of file MagazzinoController.cs.

9.66.2.24 EditMalti() [2/2]

```
ActionResult BrewDay2.Controllers.MagazzinoController.EditMalti (
    MaltiMagazzino mr )
```

Metodo invocato alla submit della form per la modifica di un malto nella ricetta Cerca nel database il malto e ne aggiorna la quantità Assegna alla variabile speciale ViewBag il malto modificato e ne ritorna la vista

Parameters

<i>mr</i>	Malto da modificare nella ricetta
-----------	-----------------------------------

Returns

Definition at line 460 of file MagazzinoController.cs.

9.66.2.25 EditZuccheri() [1/2]

```
ActionResult BrewDay2.Controllers.MagazzinoController.EditZuccheri (
    int id,
    int idr )
```

Metodo invocato alla modifica di uno zucchero nella ricetta Cerca nel database lo zucchero e la ricetta passati come parametri Ritorna la vista

Parameters

<i>id</i>	ID dello zucchero da modificare
<i>idr</i>	ID della ricetta da modificare

Returns

Definition at line 482 of file MagazzinoController.cs.

9.66.2.26 EditZuccheri() [2/2]

```
ActionResult BrewDay2.Controllers.MagazzinoController.EditZuccheri (
    ZuccheriMagazzino zr )
```

Metodo invocato alla submit della form per la modifica di uno zucchero nella ricetta Cerca nel database lo zucchero e ne aggiorna la quantità Assegna alla variabile speciale ViewBag lo zucchero modificato e ne ritorna la vista

Parameters

<i>zr</i>	Zucchero da modificare nella ricetta
-----------	--------------------------------------

Returns

Definition at line 496 of file MagazzinoController.cs.

9.66.2.27 Index()

```
ActionResult BrewDay2.Controllers.MagazzinoController.Index ( )
```

Metodo invocato alla richiesta di visualizzazione del Magazzino Setta nella variabile speciale ViewBag lo Username e ritorna la sua vista specifica confrontando gli ID

Returns

Definition at line 20 of file MagazzinoController.cs.

Inheritance diagram for BrewDay2.Controllers.MaltisController:

Public Member Functions

- ActionResult [Index](#) ()
Metodo invocato alla richiesta di Maltis Setta nella variabile speciale ViewBag l'utente loggato e restituisce alla view una lista di malti
- ActionResult [Details](#) (int? id)
Metodo invocato alla richiesta di dettagli su un malto Restituisce errore se id è nullo o non esiste Altrimenti restituisce l'elemento cercato alla pagina
- ActionResult [Create](#) ()
Metodo invocato alla creazione di un nuovo malto Assegna uno user al malto con i campi da compilare nella view Ritorna la vista
- ActionResult [Create](#) ([Bind(Include="Id,Nome,Produttore,Descrizione,Prezzo")] Malt m)
Metodo invocato alla submit della form per la creazione di un Malt Se il modello è valido, crea e aggiunge il malto al database
- ActionResult [Edit](#) (int? id)
Metodo invocato alla modifica di un nuovo malto Se l' ID è nullo ritorna uno StatusCode di BadRequest Se l' ID non è presente nel database ritorna HttpNotFound Se è presente ritorna la vista del Malt trovato
- ActionResult [Edit](#) ([Bind(Include="Id,Nome,Produttore,Descrizione,Prezzo")] Malt m)
Metodo invocato alla submit della form per la modifica di un malto Se il modello è valido sostituisce nelle database il malto con quello modificato, salva i cambiamenti Ritorna la vista
- ActionResult [Delete](#) (int? id)
Metodo invocato alla cancellazione di un malto Se l' ID è nullo ritorna uno StatusCode di BadRequest Se l' ID non è presente nel database ritorna HttpNotFound Se è presente ritorna la vista del malto trovato
- ActionResult [DeleteConfirmed](#) (int id)
Metodo invocato alla submit della form per la cancellazione di un malto Se il modello è valido rimuove nel database il malto e salva i cambiamenti Ritorna la vista

Protected Member Functions

- override void [Dispose](#) (bool disposing)

9.74.1 Detailed Description

Definition at line 13 of file MaltisController.cs.

9.74.2 Member Function Documentation

9.74.2.1 [Create\(\)](#) [1/2]

```
ActionResult BrewDay2.Controllers.MaltisController.Create ( )
```

Metodo invocato alla creazione di un nuovo malto Assegna uno user al malto con i campi da compilare nella view
Ritorna la vista

Returns

Definition at line 60 of file MaltisController.cs.

9.74.2.2 Create() [2/2]

```
ActionResult BrewDay2.Controllers.MaltisController.Create (
    [Bind(Include = "Id, Nome, Produttore, Descrizione, Prezzo")] Malti malti )
```

Metodo invocato alla submit della form per la creazione di un Maltis Se il modello è valido, crea e aggiunge il malto al database

Parameters

<i>malti</i>	Oggetto da inserire nel database
--------------	----------------------------------

Returns

Definition at line 77 of file MaltisController.cs.

9.74.2.3 Delete()

```
ActionResult BrewDay2.Controllers.MaltisController.Delete (
    int? id )
```

Metodo invocato alla cancellazione di un malto Se l' ID è nullo ritorna uno StatusCode di BadRequest Se l' ID non è presente nel database ritorna HttpNotFound Se è presente ritorna la vista del malto trovato

Parameters

<i>id</i>	Valore della chiave per il model Maltis
-----------	---

Returns

Definition at line 144 of file MaltisController.cs.

9.74.2.4 DeleteConfirmed()

```
ActionResult BrewDay2.Controllers.MaltisController.DeleteConfirmed (
    int id )
```

Metodo invocato alla submit della form per la cancellazione di un malto Se il modello è valido rimuove nel database il malto e salva i cambiamenti Ritorna la vista

Parameters

<i>id</i>	Valore della chiave del malto da eliminare
-----------	--

Returns

Definition at line 169 of file MaltisController.cs.

9.74.2.5 Details()

```
ActionResult BrewDay2.Controllers.MaltisController.Details (
    int? id )
```

Metodo invocato alla richiesta di dettagli su un malto Restituisce errore se id è nullo o non esiste Altrimenti restituisce l'elemento cercato alla pagina

Parameters

<i>id</i>	Valore della chiave per model Maltis
-----------	--------------------------------------

Returns

Definition at line 38 of file MaltisController.cs.

9.74.2.6 Dispose()

```
override void BrewDay2.Controllers.MaltisController.Dispose (
    bool disposing ) [protected]
```

Definition at line 177 of file MaltisController.cs.

9.74.2.7 Edit() [1/2]

```
ActionResult BrewDay2.Controllers.MaltisController.Edit (
    int? id )
```

Metodo invocato alla modifica di un nuovo malto Se l' ID è nullo ritorna uno StatusCode di BadRequest Se l' ID non è presente nel database ritorna HttpNotFound Se è presente ritorna la vista del Maltis trovato

Parameters

<i>id</i>	Valore della chiave per il model Maltis
-----------	---

Returns

Definition at line 98 of file MaltisController.cs.

9.74.2.8 Edit() [2/2]

```
ActionResult BrewDay2.Controllers.MaltisController.Edit (
    [Bind(Include = "Id, Nome, Produttore, Descrizione, Prezzo")] Malti malti )
```

Metodo invocato alla submit della form per la modifica di un malto Se il modello è valido sostituisce nelle database il malto con quello modificato, salva i cambiamenti Ritorna la vista

Parameters

<i>malti</i>	Oggetto da modificare nel database
--------------	------------------------------------

Returns

Definition at line 124 of file MaltisController.cs.

9.74.2.9 Index()

```
ActionResult BrewDay2.Controllers.MaltisController.Index ( )
```

Metodo invocato alla richiesta di Maltis Setta nella variabile speciale ViewBag l'utente loggato e restituisce alla view una lista di malti

Returns

Definition at line 24 of file MaltisController.cs.

9.80.1 Detailed Description

Definition at line 13 of file ManageController.cs.

9.80.2 Member Enumeration Documentation

9.80.2.1 ManageMessageld

```
enum BrewDay2.Controllers.ManageController.ManageMessageId [strong]
```

Enumerator

AddPhoneSuccess	
ChangePasswordSuccess	
SetTwoFactorSuccess	
SetPasswordSuccess	
RemoveLoginSuccess	
RemovePhoneSuccess	
Error	

Definition at line 343 of file ManageController.cs.

9.80.3 Constructor & Destructor Documentation

9.80.3.1 ManageController() [1/2]

```
BrewDay2.Controllers.ManageController.ManageController ( )
```

Definition at line 18 of file ManageController.cs.

9.80.3.2 ManageController() [2/2]

```
BrewDay2.Controllers.ManageController.ManageController (
    ApplicationUserManager userManager,
    ApplicationSignInManager signInManager )
```

Definition at line 22 of file ManageController.cs.

9.80.4 Member Function Documentation

9.80.4.1 AddPhoneNumber() [1/2]

```
ActionResult BrewDay2.Controllers.ManageController.AddPhoneNumber ( )
```

Definition at line 91 of file ManageController.cs.

9.80.4.2 AddPhoneNumber() [2/2]

```
async Task<ActionResult> BrewDay2.Controllers.ManageController.AddPhoneNumber (
    AddPhoneNumberViewModel model )
```

Definition at line 100 of file ManageController.cs.

9.80.4.3 ChangePassword() [1/2]

```
ActionResult BrewDay2.Controllers.ManageController.ChangePassword ( )
```

Definition at line 205 of file ManageController.cs.

9.80.4.4 ChangePassword() [2/2]

```
async Task<ActionResult> BrewDay2.Controllers.ManageController.ChangePassword (
    ChangePasswordViewModel model )
```

Definition at line 214 of file ManageController.cs.

9.80.4.5 DisableTwoFactorAuthentication()

```
async Task<ActionResult> BrewDay2.Controllers.ManageController.DisableTwoFactorAuthentication
( )
```

Definition at line 139 of file ManageController.cs.

9.80.4.6 Dispose()

```
override void BrewDay2.Controllers.ManageController.Dispose (
    bool disposing ) [protected]
```

Definition at line 312 of file ManageController.cs.

9.80.4.7 EnableTwoFactorAuthentication()

```
async Task<ActionResult> BrewDay2.Controllers.ManageController.EnableTwoFactorAuthentication (
)
```

Definition at line 124 of file ManageController.cs.

9.80.4.8 Index()

```
async Task<ActionResult> BrewDay2.Controllers.ManageController.Index (
    ManageMessageId? message )
```

Definition at line 42 of file ManageController.cs.

9.80.4.9 LinkLogin()

```
ActionResult BrewDay2.Controllers.ManageController.LinkLogin (
    string provider )
```

Definition at line 293 of file ManageController.cs.

9.80.4.10 LinkLoginCallback()

```
async Task<ActionResult> BrewDay2.Controllers.ManageController.LinkLoginCallback ( )
```

Definition at line 301 of file ManageController.cs.

9.80.4.11 ManageLogins()

```
async Task<ActionResult> BrewDay2.Controllers.ManageController.ManageLogins (
    ManageMessageId? message )
```

Definition at line 268 of file ManageController.cs.

9.80.4.12 RemoveLogin()

```
async Task<ActionResult> BrewDay2.Controllers.ManageController.RemoveLogin (
    string loginProvider,
    string providerKey )
```

Definition at line 69 of file ManageController.cs.

9.80.4.13 RemovePhoneNumber()

```
async Task<ActionResult> BrewDay2.Controllers.ManageController.RemovePhoneNumber ( )
```

Definition at line 188 of file ManageController.cs.

9.80.4.14 SetPassword() [1/2]

```
ActionResult BrewDay2.Controllers.ManageController.SetPassword ( )
```

Definition at line 236 of file ManageController.cs.

9.80.4.15 SetPassword() [2/2]

```
async Task<ActionResult> BrewDay2.Controllers.ManageController.SetPassword (
    SetPasswordViewModel model )
```

Definition at line 245 of file ManageController.cs.

9.80.4.16 VerifyPhoneNumber() [1/2]

```
async Task<ActionResult> BrewDay2.Controllers.ManageController.VerifyPhoneNumber (
    string phoneNumber )
```

Definition at line 152 of file ManageController.cs.

9.80.4.17 VerifyPhoneNumber() [2/2]

```
async Task<ActionResult> BrewDay2.Controllers.ManageController.VerifyPhoneNumber (
    VerifyPhoneNumberViewModel model )
```

Definition at line 163 of file ManageController.cs.

9.80.5 Property Documentation

9.80.5.1 SignInManager

[ApplicationSignInManager](#) BrewDay2.Controllers.ManageController.SignInManager [get]

Definition at line 29 of file ManageController.cs.

9.80.5.2 UserManager

[ApplicationUserManager](#) BrewDay2.Controllers.ManageController.UserManager [get]

Definition at line 35 of file ManageController.cs.

9.81.1 Detailed Description

Questa classe contiene unit test con parametri per ManageController

Definition at line 19 of file ManageControllerTest.cs.

9.81.2 Member Function Documentation

9.81.2.1 AddPhoneNumberTest()

```
ActionResult BrewDay2.Tests.ManageControllerTest.AddPhoneNumberTest (
    [PexAssumeUnderTest] ManageController target )
```

Test stub per AddPhoneNumber()

Definition at line 33 of file ManageControllerTest.cs.

9.81.2.2 AddPhoneNumberTest01()

```
Task<ActionResult> BrewDay2.Tests.ManageControllerTest.AddPhoneNumberTest01 (
    [PexAssumeUnderTest] ManageController target,
    AddPhoneNumberViewModel model )
```

Test stub per AddPhoneNumber(AddPhoneNumberViewModel)

Definition at line 42 of file ManageControllerTest.cs.

9.81.2.3 ChangePasswordTest()

```
ActionResult BrewDay2.Tests.ManageControllerTest.ChangePasswordTest (
    [PexAssumeUnderTest] ManageController target )
```

Test stub per ChangePassword()

Definition at line 51 of file ManageControllerTest.cs.

9.81.2.4 ChangePasswordTest01()

```
Task<ActionResult> BrewDay2.Tests.ManageControllerTest.ChangePasswordTest01 (
    [PexAssumeUnderTest] ManageController target,
    ChangePasswordViewModel model )
```

Test stub per ChangePassword(ChangePasswordViewModel)

Definition at line 60 of file ManageControllerTest.cs.

9.81.2.5 ConstructorTest()

```
ManageController BrewDay2.Tests.ManageControllerTest.ConstructorTest (
    ApplicationUserManager userManager,
    ApplicationSignInManager signInManager )
```

Test stub per .ctor(ApplicationUserManager, ApplicationSignInManager)

Definition at line 24 of file ManageControllerTest.cs.

9.81.2.6 DisableTwoFactorAuthenticationTest()

```
Task<ActionResult> BrewDay2.Tests.ManageControllerTest.DisableTwoFactorAuthenticationTest (
    [PexAssumeUnderTest] ManageController target )
```

Test stub per DisableTwoFactorAuthentication()

Definition at line 69 of file ManageControllerTest.cs.

9.81.2.7 EnableTwoFactorAuthenticationTest()

```
Task<ActionResult> BrewDay2.Tests.ManageControllerTest.EnableTwoFactorAuthenticationTest (
    [PexAssumeUnderTest] ManageController target )
```

Test stub per EnableTwoFactorAuthentication()

Definition at line 78 of file ManageControllerTest.cs.

9.81.2.8 IndexTest()

```
Task<ActionResult> BrewDay2.Tests.ManageControllerTest.IndexTest (
    [PexAssumeUnderTest] ManageController target,
    ManageController.ManageMessageId? message )
```

Test stub per Index(Nullable`1<ManageMessageId>)

Definition at line 87 of file ManageControllerTest.cs.

9.81.2.9 LinkLoginCallbackTest()

```
Task<ActionResult> BrewDay2.Tests.ManageControllerTest.LinkLoginCallbackTest (
    [PexAssumeUnderTest] ManageController target )
```

Test stub per LinkLoginCallback()

Definition at line 105 of file ManageControllerTest.cs.

9.81.2.10 LinkLoginTest()

```
ActionResult BrewDay2.Tests.ManageControllerTest.LinkLoginTest (
    [PexAssumeUnderTest] ManageController target,
    string provider )
```

Test stub per LinkLogin(String)

Definition at line 96 of file ManageControllerTest.cs.

9.81.2.11 ManageLoginsTest()

```
Task<ActionResult> BrewDay2.Tests.ManageControllerTest.ManageLoginsTest (
    [PexAssumeUnderTest] ManageController target,
    ManageController.ManageMessageId? message )
```

Test stub per ManageLogins(Nullable`1<ManageMessageId>)

Definition at line 114 of file ManageControllerTest.cs.

9.81.2.12 RemoveLoginTest()

```
Task<ActionResult> BrewDay2.Tests.ManageControllerTest.RemoveLoginTest (
    [PexAssumeUnderTest] ManageController target,
    string loginProvider,
    string providerKey )
```

Test stub per RemoveLogin(String, String)

Definition at line 123 of file ManageControllerTest.cs.

9.81.2.13 RemovePhoneNumberTest()

```
Task<ActionResult> BrewDay2.Tests.ManageControllerTest.RemovePhoneNumberTest (
    [PexAssumeUnderTest] ManageController target )
```

Test stub per RemovePhoneNumber()

Definition at line 136 of file ManageControllerTest.cs.

9.81.2.14 SetPasswordTest()

```
ActionResult BrewDay2.Tests.ManageControllerTest.SetPasswordTest (
    [PexAssumeUnderTest] ManageController target )
```

Test stub per SetPassword()

Definition at line 145 of file ManageControllerTest.cs.

9.81.2.15 SetPasswordTest01()

```
Task<ActionResult> BrewDay2.Tests.ManageControllerTest.SetPasswordTest01 (
    [PexAssumeUnderTest] ManageController target,
    SetPasswordViewModel model )
```

Test stub per SetPassword(SetPasswordViewModel)

Definition at line 154 of file ManageControllerTest.cs.

9.81.2.16 SignInManagerGetTest()

```
ApplicationSignInManager BrewDay2.Tests.ManageControllerTest.SignInManagerGetTest (
    [PexAssumeUnderTest] ManageController target )
```

Test stub per get_SignInManager()

Definition at line 181 of file ManageControllerTest.cs.

9.81.2.17 UserManagerGetTest()

```
ApplicationUserManager BrewDay2.Tests.ManageControllerTest.UserManagerGetTest (
    [PexAssumeUnderTest] ManageController target )
```

Test stub per get_UserManager()

Definition at line 190 of file ManageControllerTest.cs.

9.81.2.18 VerifyPhoneNumberTest()

```
Task<ActionResult> BrewDay2.Tests.ManageControllerTest.VerifyPhoneNumberTest (
    [PexAssumeUnderTest] ManageController target,
    string phoneNumber )
```

Test stub per VerifyPhoneNumber(String)

Definition at line 163 of file ManageControllerTest.cs.

9.81.2.19 VerifyPhoneNumberTest01()

```
Task<ActionResult> BrewDay2.Tests.ManageControllerTest.VerifyPhoneNumberTest01 (
    [PexAssumeUnderTest] ManageController target,
    VerifyPhoneNumberViewModel model )
```

Test stub per VerifyPhoneNumber(VerifyPhoneNumberViewModel)

Definition at line 172 of file ManageControllerTest.cs.

9.93 BrewDay2.Controllers.RicetteController Class Reference

Inheritance diagram for BrewDay2.Controllers.RicetteController:

Public Member Functions

- ActionResult [Index](#) ()
Metodo invocato alla richiesta di Ricette Ritorna la vista delle ricette
- ActionResult [MyRecipes](#) ()
Metodo invocato alla richiesta di visualizzazione delle mie ricette Ritorna la vista
- ActionResult [Index](#) (String nomeparametro)
Metodo invocato alla richiesta di una categoria di ricette Se il parametro passato corrisponde ad una categoria mostra le ricette che le appartengono
- ActionResult [Details](#) (int? id)
Metodo invocato alla richiesta di dettagli delle ricette Restituisce errore se id è nullo o non esiste Ritorna la vista
- ActionResult [Create](#) ()
- ActionResult [WhatShoudIBrewToday](#) ()
- ActionResult [Create](#) (Ricette ricette)
Metodo invocato alla submit della form per la creazione di una Ricetta Se il modello è valido, crea e aggiunge la ricetta al database Ritorna la vista
- ActionResult [Edit](#) (int? id)
Metodo invocato alla modifica di una ricetta Se l' ID è nullo ritorna uno StatusCode di BadRequest Se l' ID non è presente nel database ritorna HttpNotFound Se è presente ritorna la vista della ricetta trovato

Parameters

id	Valore della chiave per il model Ricette
----	--

Returns

- ActionResult [Edit \(Ricette ricette\)](#)
Metodo invocato alla submit della form per la modifica di una ricetta Se il modello è valido sostituisce nel database la ricetta con quella modificata, salva i cambiamenti Ritorna la vista
- ActionResult [Delete](#) (int? id)
Metodo invocato alla cancellazione di una ricetta Se l' ID è nullo ritorna uno StatusCode di BadRequest Se l' ID non è presente nel database ritorna HttpNotFound Se è presente ritorna la vista della ricetta trovata
- ActionResult [DeleteConfirmed](#) (int id)
Metodo invocato alla submit della form per la cancellazione di una ricetta Se il modello è valido rimuove nel database la ricetta e salva i cambiamenti Ritorna la vista
- ActionResult [AggiungiAdditivo](#) (int id)
Metodo invocato alla aggiunta di un additivo alla ricetta Crea un nuovo additivo e lo assegna alla variabile speciale ViewBag Ritorna la vista
- ActionResult [AggiungiAdditivo \(AdditiviRicetta ar\)](#)
Metodo invocato alla submit della form per l'aggiunta di un additivo alla ricetta Se il modello è valido aggiunge nel database l'additivo e salva i cambiamenti Crea un nuovo additivo e lo assegna alla variabile speciale ViewBag Ritorna la vista
- ActionResult [AggiungiLievito](#) (int id)
Metodo invocato alla aggiunta di un lievito alla ricetta Crea un nuovo lievito e lo assegna alla variabile speciale ViewBag Ritorna la vista
- ActionResult [AggiungiLievito \(LievitiRicetta lr\)](#)
Metodo invocato alla submit della form per l'aggiunta di un lievito alla ricetta Se il modello è valido aggiunge nel database il lievito e salva i cambiamenti Crea un nuovo lievito e lo assegna alla variabile speciale ViewBag Ritorna la vista
- ActionResult [AggiungiLuppolo](#) (int id)
Metodo invocato alla aggiunta di un luppolo alla ricetta Crea un nuovo luppolo e lo assegna alla variabile speciale ViewBag Ritorna la vista
- ActionResult [AggiungiLuppolo \(LuppoliRicetta lr\)](#)
Metodo invocato alla submit della form per l'aggiunta di un luppolo alla ricetta Se il modello è valido aggiunge nel database il luppolo e salva i cambiamenti Crea un nuovo luppolo e lo assegna alla variabile speciale ViewBag Ritorna la vista
- ActionResult [AggiungiMalti](#) (int id)
Metodo invocato alla aggiunta di un malto alla ricetta Crea un nuovo malto e lo assegna alla variabile speciale ViewBag Ritorna la vista
- ActionResult [AggiungiMalti \(MaltiRicetta mr\)](#)
Metodo invocato alla submit della form per l'aggiunta di un malto alla ricetta Se il modello è valido aggiunge nel database il malto e salva i cambiamenti Crea un nuovo malto e lo assegna alla variabile speciale ViewBag Ritorna la vista
- ActionResult [AggiungiZuccheri](#) (int id)
Metodo invocato alla aggiunta di uno zucchero alla ricetta Crea un nuovo zucchero e lo assegna alla variabile speciale ViewBag Ritorna la vista
- ActionResult [AggiungiZuccheri \(ZuccheriRicetta zr\)](#)
Metodo invocato alla submit della form per l'aggiunta di uno zucchero alla ricetta Se il modello è valido aggiunge nel database lo zucchero e salva i cambiamenti Crea un nuovo zucchero e lo assegna alla variabile speciale ViewBag Ritorna la vista
- ActionResult [EditAdditivo](#) (int id, int idr)
Metodo invocato alla modifica di un additivo nella ricetta Cerca nel database l'additivo e la ricetta passati come parametri Ritorna la vista
- ActionResult [EditAdditivo \(AdditiviRicetta ar\)](#)

Metodo invocato alla submit della form per la modifica di un additivo nella ricetta Cerca nel database l'additivo e ne aggiorna la quantità Assegna alla variabile speciale ViewBag l'additivo modificato e ne ritorna la vista

- ActionResult [EditLievito](#) (int id, int idr)

Metodo invocato alla modifica di un lievito nella ricetta Cerca nel database il lievito e la ricetta passati come parametri Ritorna la vista

- ActionResult [EditLievito](#) ([LievitiRicetta](#) lr)

Metodo invocato alla submit della form per la modifica di un lievito nella ricetta Cerca nel database il lievito e ne aggiorna la quantità Assegna alla variabile speciale ViewBag il lievito modificato e ne ritorna la vista

- ActionResult [EditLuppolo](#) (int id, int idr)

Metodo invocato alla modifica di un luppolo nella ricetta Cerca nel database il luppolo e la ricetta passati come parametri Ritorna la vista

- ActionResult [EditLuppolo](#) ([LuppoliRicetta](#) lr)

Metodo invocato alla submit della form per la modifica di un luppolo nella ricetta Cerca nel database il luppolo e ne aggiorna la quantità Assegna alla variabile speciale ViewBag il luppolo modificato e ne ritorna la vista

- ActionResult [EditMalti](#) (int id, int idr)

Metodo invocato alla modifica di un malto nella ricetta Cerca nel database il malto e la ricetta passati come parametri Ritorna la vista

- ActionResult [EditMalti](#) ([MaltiRicetta](#) mr)

Metodo invocato alla submit della form per la modifica di un malto nella ricetta Cerca nel database il malto e ne aggiorna la quantità Assegna alla variabile speciale ViewBag il malto modificato e ne ritorna la vista

- ActionResult [EditZuccheri](#) (int id, int idr)

Metodo invocato alla modifica di uno zucchero nella ricetta Cerca nel database lo zucchero e la ricetta passati come parametri Ritorna la vista

- ActionResult [EditZuccheri](#) ([ZuccheriRicetta](#) zr, int idr)

Metodo invocato alla submit della form per la modifica di uno zucchero nella ricetta Cerca nel database lo zucchero e ne aggiorna la quantità Assegna alla variabile speciale ViewBag lo zucchero modificato e ne ritorna la vista

Protected Member Functions

- override void [Dispose](#) (bool disposing)

9.93.1 Detailed Description

Definition at line 14 of file RicetteController.cs.

9.93.2 Member Function Documentation

9.93.2.1 AggiungiAdditivo() [1/2]

```
ActionResult BrewDay2.Controllers.RicetteController.AggiungiAdditivo (
    int id )
```

Metodo invocato alla aggiunta di un additivo alla ricetta Crea un nuovo additivo e lo assegna alla variabile speciale ViewBag Ritorna la vista

Parameters

<i>id</i>	Valore della chiave per l'additivo da aggiungere
-----------	--

Returns

Definition at line 300 of file RicetteController.cs.

9.93.2.2 AggiungiAdditivo() [2/2]

```
ActionResult BrewDay2.Controllers.RicetteController.AggiungiAdditivo (
    AdditiviRicetta ar )
```

Metodo invocato alla submit della form per l'aggiunta di un additivo alla ricetta Se il modello è valido aggiunge nel database l'additivo e salva i cambiamenti Crea un nuovo additivo e lo assegna alla variabile speciale ViewBag Ritorna la vista

Parameters

<i>ar</i>	Additivo da aggiungere alla ricetta
-----------	-------------------------------------

Returns

Definition at line 317 of file RicetteController.cs.

9.93.2.3 AggiungiLievito() [1/2]

```
ActionResult BrewDay2.Controllers.RicetteController.AggiungiLievito (
    int id )
```

Metodo invocato alla aggiunta di un lievito alla ricetta Crea un nuovo lievito e lo assegna alla variabile speciale ViewBag Ritorna la vista

Parameters

<i>id</i>	Valore della chiave per il lievito da aggiungere
-----------	--

Returns

Definition at line 337 of file RicetteController.cs.

9.93.2.4 AggiungiLievito() [2/2]

```
ActionResult BrewDay2.Controllers.RicetteController.AggiungiLievito (
    LievitiRicetta lr )
```

Metodo invocato alla submit della form per l'aggiunta di un lievito alla ricetta Se il modello è valido aggiunge nel database il lievito e salva i cambiamenti Crea un nuovo lievito e lo assegna alla variabile speciale ViewBag Ritorna la vista

Parameters

<i>lr</i>	Lievito da aggiungere alla ricetta
-----------	------------------------------------

Returns

Definition at line 354 of file RicetteController.cs.

9.93.2.5 AggiungiLuppolo() [1/2]

```
ActionResult BrewDay2.Controllers.RicetteController.AggiungiLuppolo (
    int id )
```

Metodo invocato alla aggiunta di un luppolo alla ricetta Crea un nuovo luppolo e lo assegna alla variabile speciale ViewBag Ritorna la vista

Parameters

<i>id</i>	Valore della chiave per il luppolo da aggiungere
-----------	--

Returns

Definition at line 374 of file RicetteController.cs.

9.93.2.6 AggiungiLuppolo() [2/2]

```
ActionResult BrewDay2.Controllers.RicetteController.AggiungiLuppolo (
    LuppoliRicetta lr )
```

Metodo invocato alla submit della form per l'aggiunta di un luppolo alla ricetta Se il modello è valido aggiunge nel database il luppolo e salva i cambiamenti Crea un nuovo luppolo e lo assegna alla variabile speciale ViewBag Ritorna la vista

Parameters

<i>lr</i>	Luppolo da aggiungere alla ricetta
-----------	------------------------------------

Returns

Definition at line 391 of file RicetteController.cs.

9.93.2.7 AggiungiMalti() [1/2]

```
ActionResult BrewDay2.Controllers.RicetteController.AggiungiMalti (
    int id )
```

Metodo invocato alla aggiunta di un malto alla ricetta Crea un nuovo malto e lo assegna alla variabile speciale ViewBag Ritorna la vista

Parameters

<i>id</i>	Valore della chiave per il malto da aggiungere
-----------	--

Returns

Definition at line 411 of file RicetteController.cs.

9.93.2.8 AggiungiMalti() [2/2]

```
ActionResult BrewDay2.Controllers.RicetteController.AggiungiMalti (
    MaltiRicetta mr )
```

Metodo invocato alla submit della form per l'aggiunta di un malto alla ricetta Se il modello è valido aggiunge nel database il malto e salva i cambiamenti Crea un nuovo malto e lo assegna alla variabile speciale ViewBag Ritorna la vista

Parameters

<i>mr</i>	Malto da aggiungere alla ricetta
-----------	----------------------------------

Returns

Definition at line 428 of file RicetteController.cs.

9.93.2.9 AggiungiZuccheri() [1/2]

```
ActionResult BrewDay2.Controllers.RicetteController.AggiungiZuccheri (
    int id )
```

Metodo invocato alla aggiunta di uno zucchero alla ricetta Crea un nuovo zucchero e lo assegna alla variabile speciale ViewBag Ritorna la vista

Parameters

<i>id</i>	Valore della chiave per lo zucchero da aggiungere
-----------	---

Returns

Definition at line 448 of file RicetteController.cs.

9.93.2.10 AggiungiZuccheri() [2/2]

```
ActionResult BrewDay2.Controllers.RicetteController.AggiungiZuccheri (
    ZuccheriRicetta zr )
```

Metodo invocato alla submit della form per l'aggiunta di uno zucchero alla ricetta Se il modello è valido aggiunge nel database lo zucchero e salva i cambiamenti Crea un nuovo zucchero e lo assegna alla variabile speciale ViewBag Ritorna la vista

Parameters

<i>zr</i>	Zucchero da aggiungere alla ricetta
-----------	-------------------------------------

Returns

Definition at line 465 of file RicetteController.cs.

9.93.2.11 Create() [1/2]

```
ActionResult BrewDay2.Controllers.RicetteController.Create ( )
```

Definition at line 81 of file RicetteController.cs.

9.93.2.12 Create() [2/2]

```
ActionResult BrewDay2.Controllers.RicetteController.Create (
    Ricette ricette )
```

Metodo invocato alla submit della form per la creazione di una Ricetta Se il modello è valido, crea e aggiunge la ricetta al database Ritorna la vista

Parameters

<i>ricette</i>	Oggetto da inserire nel database
----------------	----------------------------------

Returns

Definition at line 184 of file RicetteController.cs.

9.93.2.13 Delete()

```
ActionResult BrewDay2.Controllers.RicetteController.Delete (
    int? id )
```

Metodo invocato alla cancellazione di una ricetta Se l' ID è nullo ritorna uno StatusCode di BadRequest Se l' ID non è presente nel database ritorna HttpNotFound Se è presente ritorna la vista della ricetta trovata

Parameters

<i>id</i>	Valore della chiave per il model Ricette
-----------	--

Returns

Definition at line 251 of file RicetteController.cs.

9.93.2.14 DeleteConfirmed()

```
ActionResult BrewDay2.Controllers.RicetteController.DeleteConfirmed (
    int id )
```

Metodo invocato alla submit della form per la cancellazione di una ricetta Se il modello è valido rimuove nel database la ricetta e salva i cambiamenti Ritorna la vista

Parameters

<i>id</i>	Valore della chiave della ricetta da eliminare
-----------	--

Returns

Definition at line 276 of file RicetteController.cs.

9.93.2.15 Details()

```
ActionResult BrewDay2.Controllers.RicetteController.Details (
    int? id )
```

Metodo invocato alla richiesta di dettagli delle ricette Restituisce errore se id è nullo o non esiste Ritorna la vista

Parameters

<i>id</i>	Valore della chiave per il model Ricette
-----------	--

Returns

Definition at line 64 of file RicetteController.cs.

9.93.2.16 Dispose()

```
override void BrewDay2.Controllers.RicetteController.Dispose (
    bool disposing ) [protected]
```

Definition at line 284 of file RicetteController.cs.

9.93.2.17 Edit() [1/2]

```
ActionResult BrewDay2.Controllers.RicetteController.Edit (
    int? id )
```

Metodo invocato alla modifica di una ricetta Se l' ID è nullo ritorna uno StatusCode di BadRequest Se l' ID non è presente nel database ritorna HttpNotFound Se è presente ritorna la vista della ricetta trovato

Parameters

<i>id</i>	Valore della chiave per il model Ricette
-----------	--

Returns

Definition at line 205 of file RicetteController.cs.

9.93.2.18 Edit() [2/2]

```
ActionResult BrewDay2.Controllers.RicetteController.Edit (
    Ricette ricette )
```

Metodo invocato alla submit della form per la modifica di una ricetta Se il modello è valido sostituisce nel database la ricetta con quella modificata, salva i cambiamenti Ritorna la vista

Parameters

<i>ricette</i>	Oggetto da modificare nel database
----------------	------------------------------------

Returns

Definition at line 231 of file RicetteController.cs.

9.93.2.19 EditAdditivo() [1/2]

```
ActionResult BrewDay2.Controllers.RicetteController.EditAdditivo (
    int id,
    int idr )
```

Metodo invocato alla modifica di un additivo nella ricetta Cerca nel database l'additivo e la ricetta passati come parametri Ritorna la vista

Parameters

<i>id</i>	ID dell'additivo da modificare
<i>idr</i>	ID della ricetta da modificare

Returns

Definition at line 486 of file RicetteController.cs.

9.93.2.20 EditAdditivo() [2/2]

```
ActionResult BrewDay2.Controllers.RicetteController.EditAdditivo (
    AdditiviRicetta ar )
```

Metodo invocato alla submit della form per la modifica di un additivo nella ricetta Cerca nel database l'additivo e ne aggiorna la quantità Assegna alla variabile speciale ViewBag l'additivo modificato e ne ritorna la vista

Parameters

<i>ar</i>	Additivo da modificare nella ricetta
-----------	--------------------------------------

Returns

Definition at line 501 of file RicetteController.cs.

9.93.2.21 EditLievito() [1/2]

```
ActionResult BrewDay2.Controllers.RicetteController.EditLievito (
    int id,
    int idr )
```

Metodo invocato alla modifica di un lievito nella ricetta Cerca nel database il lievito e la ricetta passati come parametri Ritorna la vista

Parameters

<i>id</i>	ID del lievito da modificare
<i>idr</i>	ID della ricetta da modificare

Returns

Definition at line 523 of file RicetteController.cs.

9.93.2.22 EditLievito() [2/2]

```
ActionResult BrewDay2.Controllers.RicetteController.EditLievito (
    LievitiRicetta lr )
```

Metodo invocato alla submit della form per la modifica di un lievito nella ricetta Cerca nel database il lievito e ne aggiorna la quantità Assegna alla variabile speciale ViewBag il lievito modificato e ne ritorna la vista

Parameters

<i>lr</i>	Lievito da modificare nella ricetta
-----------	-------------------------------------

Returns

Definition at line 537 of file RicetteController.cs.

9.93.2.23 EditLuppolo() [1/2]

```
ActionResult BrewDay2.Controllers.RicetteController.EditLuppolo (
    int id,
    int idr )
```

Metodo invocato alla modifica di un luppolo nella ricetta Cerca nel database il luppolo e la ricetta passati come parametri Ritorna la vista

Parameters

<i>id</i>	ID del luppolo da modificare
<i>idr</i>	ID della ricetta da modificare

Returns

Definition at line 559 of file RicetteController.cs.

9.93.2.24 EditLuppolo() [2/2]

```
ActionResult BrewDay2.Controllers.RicetteController.EditLuppolo (
    LuppoliRicetta lr )
```

Metodo invocato alla submit della form per la modifica di un luppolo nella ricetta Cerca nel database il luppolo e ne aggiorna la quantità Assegna alla variabile speciale ViewBag il luppolo modificato e ne ritorna la vista

Parameters

<i>lr</i>	Luppolo da modificare nella ricetta
-----------	-------------------------------------

Returns

Definition at line 573 of file RicetteController.cs.

9.93.2.25 EditMalti() [1/2]

```
ActionResult BrewDay2.Controllers.RicetteController.EditMalti (
    int id,
    int idr )
```

Metodo invocato alla modifica di un malto nella ricetta Cerca nel database il malto e la ricetta passati come parametri
Ritorna la vista

Parameters

<i>id</i>	ID del malto da modificare
<i>idr</i>	ID della ricetta da modificare

Returns

Definition at line 593 of file RicetteController.cs.

9.93.2.26 EditMalti() [2/2]

```
ActionResult BrewDay2.Controllers.RicetteController.EditMalti (
    MaltiRicetta mr )
```

Metodo invocato alla submit della form per la modifica di un malto nella ricetta Cerca nel database il malto e ne
aggiorna la quantità Assegna alla variabile speciale ViewBag il malto modificato e ne ritorna la vista

Parameters

<i>mr</i>	Malto da modificare nella ricetta
-----------	-----------------------------------

Returns

Definition at line 607 of file RicetteController.cs.

9.93.2.27 EditZuccheri() [1/2]

```
ActionResult BrewDay2.Controllers.RicetteController.EditZuccheri (
    int id,
    int idr )
```

Metodo invocato alla modifica di uno zucchero nella ricetta Cerca nel database lo zucchero e la ricetta passati come parametri Ritorna la vista

Parameters

<i>id</i>	ID dello zucchero da modificare
<i>idr</i>	ID della ricetta da modificare

Returns

Definition at line 629 of file RicetteController.cs.

9.93.2.28 EditZuccheri() [2/2]

```
ActionResult BrewDay2.Controllers.RicetteController.EditZuccheri (
    ZuccheriRicetta zr,
    int idr )
```

Metodo invocato alla submit della form per la modifica di uno zucchero nella ricetta Cerca nel database lo zucchero e ne aggiorna la quantità Assegna alla variabile speciale ViewBag lo zucchero modificato e ne ritorna la vista

Parameters

<i>zr</i>	Zucchero da modificare nella ricetta
-----------	--------------------------------------

Returns

Definition at line 643 of file RicetteController.cs.

9.93.2.29 Index() [1/2]

```
ActionResult BrewDay2.Controllers.RicetteController.Index ( )
```

Metodo invocato alla richiesta di Ricette Ritorna la vista delle ricette

Returns

Definition at line 24 of file RicetteController.cs.

9.93.2.30 Index() [2/2]

```
ActionResult BrewDay2.Controllers.RicetteController.Index (
    String nomeparametro )
```

Metodo invocato alla richiesta di una categoria di ricette Se il parametro passato corrisponde ad una categoria mostra le ricette che le appartengono

Parameters

<i>nomeparametro</i>	Nome della categoria da visualizzare
----------------------	--------------------------------------

Returns

Definition at line 49 of file RicetteController.cs.

9.93.2.31 MyRecipes()

```
ActionResult BrewDay2.Controllers.RicetteController.MyRecipes ( )
```

Metodo invocato alla richiesta di visualizzazione delle mie ricette Ritorna la vista

Returns

Definition at line 35 of file RicetteController.cs.

9.93.2.32 WhatShoudIBrewToday()

`ActionResult BrewDay2.Controllers.RicetteController.WhatShoudIBrewToday ()`

Definition at line 89 of file `RicetteController.cs`.

9.111 BrewDay2.Controllers.ZuccherisController Class Reference

Inheritance diagram for BrewDay2.Controllers.ZuccherisController:

Public Member Functions

- ActionResult [Index](#) ()
Metodo invocato alla richiesta di Zuccheris Setta nella variabile speciale ViewBag l'utente loggato e restituisce alla view una lista di zuccheri
- ActionResult [Details](#) (int? id)
Metodo invocato alla richiesta di dettagli su uno zucchero Restituisce errore se id è nullo o non esiste Altrimenti restituisce l'elemento cercato alla pagina
- ActionResult [Create](#) ()
Metodo invocato alla creazione di un nuovo zucchero Assegna uno user lo zucchero con i campi da compilare nella view Ritorna la vista
- ActionResult [Create](#) ([Bind(Include="Id,Nome,Descrizione,Produttore,Prezzo")] Zuccheri zuccheri)
Metodo invocato alla submit della form per la creazione di uno Zuccheris Se il modello è valido, crea e aggiunge lo zucchero al database
- ActionResult [Edit](#) (int? id)
Metodo invocato alla modifica di un nuovo zucchero Se l' ID è nullo ritorna uno StatusCode di BadRequest Se l' ID non è presente nel database ritorna HttpNotFound Se è presente ritorna la vista del Zuccheris trovato

Parameters

id	Valore della chiave per il model Zuccheris
----	--

Returns

- ActionResult [Edit](#) ([Bind(Include="Id,Nome,Descrizione,Produttore,Prezzo")] Zuccheri zuccheri)
Metodo invocato alla submit della form per la modifica di uno zucchero Se il modello è valido sostituisce nelle database lo zucchero con quello modificato, salva i cambiamenti Ritorna la vista
- ActionResult [Delete](#) (int? id)
Metodo invocato alla cancellazione di uno zucchero Se l' ID è nullo ritorna uno StatusCode di BadRequest Se l' ID non è presente nel database ritorna HttpNotFound Se è presente ritorna la vista dello zucchero trovato

- ActionResult [DeleteConfirmed](#) (int id)

Metodo invocato alla submit della form per la cancellazione di uno zucchero Se il modello è valido rimuove nel database lo zucchero e salva i cambiamenti Ritorna la vista

Protected Member Functions

- override void [Dispose](#) (bool disposing)

9.111.1 Detailed Description

Definition at line 13 of file ZuccherisController.cs.

9.111.2 Member Function Documentation

9.111.2.1 [Create\(\)](#) [1/2]

```
ActionResult BrewDay2.Controllers.ZuccherisController.Create ( )
```

Metodo invocato alla creazione di un nuovo zucchero Assegna uno user lo zucchero con i campi da compilare nella view Ritorna la vista

Returns

Definition at line 60 of file ZuccherisController.cs.

9.111.2.2 [Create\(\)](#) [2/2]

```
ActionResult BrewDay2.Controllers.ZuccherisController.Create (
    [Bind(Include = "Id, Nome, Descrizione, Produttore, Prezzo")] Zuccheri zuccheri )
```

Metodo invocato alla submit della form per la creazione di uno Zuccheris Se il modello è valido, crea e aggiunge lo zucchero al database

Parameters

<i>zuccheri</i>	Oggetto da inserire nel database
-----------------	----------------------------------

Returns

Definition at line 77 of file ZuccherisController.cs.

9.111.2.3 Delete()

```
ActionResult BrewDay2.Controllers.ZuccherisController.Delete (
    int? id )
```

Metodo invocato alla cancellazione di uno zucchero Se l' ID è nullo ritorna uno StatusCode di BadRequest Se l' ID non è presente nel database ritorna HttpNotFound Se è presente ritorna la vista dello zucchero trovato

Parameters

<i>id</i>	Valore della chiave per il model Zuccheris
-----------	--

Returns

Definition at line 143 of file ZuccherisController.cs.

9.111.2.4 DeleteConfirmed()

```
ActionResult BrewDay2.Controllers.ZuccherisController.DeleteConfirmed (
    int id )
```

Metodo invocato alla submit della form per la cancellazione di uno zucchero Se il modello è valido rimuove nel database lo zucchero e salva i cambiamenti Ritorna la vista

Parameters

<i>id</i>	Valore della chiave dello zucchero da eliminare
-----------	---

Returns

Definition at line 168 of file ZuccherisController.cs.

9.111.2.5 Details()

```
ActionResult BrewDay2.Controllers.ZuccherisController.Details (
    int? id )
```

Metodo invocato alla richiesta di dettagli su uno zucchero Restituisce errore se id è nullo o non esiste Altrimenti restituisce l'elemento cercato alla pagina

Parameters

<i>id</i>	Valore della chiave per model Zuccheris
-----------	---

Returns

Definition at line 38 of file ZuccherisController.cs.

9.111.2.6 Dispose()

```
override void BrewDay2.Controllers.ZuccherisController.Dispose (
    bool disposing ) [protected]
```

Definition at line 176 of file ZuccherisController.cs.

9.111.2.7 Edit() [1/2]

```
ActionResult BrewDay2.Controllers.ZuccherisController.Edit (
    int? id )
```

Metodo invocato alla modifica di un nuovo zucchero Se l' ID è nullo ritorna uno StatusCode di BadRequest Se l' ID non è presente nel database ritorna HttpNotFound Se è presente ritorna la vista del Zuccheris trovato

Parameters

<i>id</i>	Valore della chiave per il model Zuccheris
-----------	--

Returns

Definition at line 97 of file ZuccherisController.cs.

9.111.2.8 Edit() [2/2]

```
ActionResult BrewDay2.Controllers.ZuccherisController.Edit (
    [Bind(Include = "Id,Nome,Descrizione,Produttore,Prezzo")] Zuccheri zuccheri )
```

Metodo invocato alla submit della form per la modifica di uno zucchero Se il modello è valido sostituisce nelle database lo zucchero con quello modificato, salva i cambiamenti Ritorna la vista

Parameters

<code>zuccheri</code>	Oggetto da modificare nel database
-----------------------	------------------------------------

Returns

Definition at line 123 of file ZuccherisController.cs.

9.111.2.9 Index()

```
ActionResult BrewDay2.Controllers.ZuccherisController.Index ( )
```

Metodo invocato alla richiesta di Zuccheris Setta nella variabile speciale ViewBag l'utente loggato e restituisce alla view una lista di zuccheri

Returns

Definition at line 24 of file ZuccherisController.cs.

The documentation for this class was generated from the following file:

Definition at line 18 of file ZuccherisControllerTest.cs.

9.112.2 Member Function Documentation

9.112.2.1 ConstructorTest()

```
ZuccherisController BrewDay2.Tests.ZuccherisControllerTest.ConstructorTest ( )
```

Test stub per .ctor()

Definition at line 23 of file ZuccherisControllerTest.cs.

9.112.2.2 CreateTest()

```
ActionResult BrewDay2.Tests.ZuccherisControllerTest.CreateTest (
    [PexAssumeUnderTest] ZuccherisController target )
```

Test stub per Create()

Definition at line 32 of file ZuccherisControllerTest.cs.

9.112.2.3 CreateTest01()

```
ActionResult BrewDay2.Tests.ZuccherisControllerTest.CreateTest01 (
    [PexAssumeUnderTest] ZuccherisController target,
    Zuccheri zuccheri )
```

Test stub per Create(Zuccheri)

Definition at line 41 of file ZuccherisControllerTest.cs.

9.112.2.4 DeleteConfirmedTest()

```
ActionResult BrewDay2.Tests.ZuccherisControllerTest.DeleteConfirmedTest (
    [PexAssumeUnderTest] ZuccherisController target,
    int id )
```

Test stub per DeleteConfirmed(Int32)

Definition at line 59 of file ZuccherisControllerTest.cs.

9.112.2.5 DeleteTest()

```
ActionResult BrewDay2.Tests.ZuccherisControllerTest.DeleteTest (
    [PexAssumeUnderTest] ZuccherisController target,
    int? id )
```

Test stub per Delete(Nullable`1<Int32>)

Definition at line 50 of file ZuccherisControllerTest.cs.

9.112.2.6 DetailsTest()

```
ActionResult BrewDay2.Tests.ZuccherisControllerTest.DetailsTest (
    [PexAssumeUnderTest] ZuccherisController target,
    int? id )
```

Test stub per Details(Nullable`1<Int32>)

Definition at line 68 of file ZuccherisControllerTest.cs.

9.112.2.7 EditTest()

```
ActionResult BrewDay2.Tests.ZuccherisControllerTest.EditTest (
    [PexAssumeUnderTest] ZuccherisController target,
    int? id )
```

Test stub per Edit(Nullable`1<Int32>)

Definition at line 77 of file ZuccherisControllerTest.cs.

9.112.2.8 EditTest01()

```
ActionResult BrewDay2.Tests.ZuccherisControllerTest.EditTest01 (
    [PexAssumeUnderTest] ZuccherisController target,
    Zuccheri zuccheri )
```

Test stub per Edit(Zuccheri)

Definition at line 86 of file ZuccherisControllerTest.cs.

9.112.2.9 IndexTest()

```
ActionResult BrewDay2.Tests.ZuccherisControllerTest.IndexTest (
    [PexAssumeUnderTest] ZuccherisController target )
```

Test stub per Index()

Definition at line 95 of file ZuccherisControllerTest.cs.
